Appendix A – Data Element Lists

Because TREx uses a single XML extract file schema whether the record being transferred as a student record or a high school transcript, many data elements are shown as "Not Required" with the goal of reducing the risk of a high number of failures when extracting student records. Those data elements required by the TREx schema include the following:

Data Element Common Name	XML Name
Student ID	StudentID
First Name	FirstName
Last Name	LastName
Gender Code	Gender
Ethnicity Code	Race
Date of Birth	BirthDate
District ID	DistrictID
Campus ID	SchoolID
Campus Name	SchoolName
Campus Phone	PhoneNumber
Academic Year	SchoolYear
Grade Level (Current)	GradeLevel

The following section is a list of the TREx data elements arranged by the record type (as they would appear in a record; not within a complex type). The table indicates a data element as required in the following manner:

- Schema Required: required within the file extract by the TREx schema
- State Required Minimum: required by state law and/or Texas Education Code
- State Required Recommended: recommended by TEA, institutions of higher education, and user focus groups

If a data element is shown as not required for the file extract but data are available and relevant to the accuracy and completeness of the student record or transcript, it is the responsibility of the campus/district to include these data.

Element List by Record Type
