Highlights

How many students drop out?

- ◆ In 1997-98, a total of 27,550 students in Grades 7-12 dropped out of Texas public schools.
- ◆ Statewide, the annual dropout rate was 1.6 percent, unchanged from 1996-97.
- ◆ The 1997-98 actual longitudinal dropout rate, calculated for a cohort of students tracked from 7th to 12th grade, was 14.7 percent.

Who drops out and why?

- ◆ About 77 percent of dropouts were overage for grade, down from over 80 percent in 1996-97.
- ◆ On average, males continued to drop out at a slightly higher rate than females.
- ◆ Hispanic students had the highest average dropout rate, at 2.3 percent, followed by African American students (2.1%).
- ◆ Reasons cited for dropping out of school included poor attendance, entering non-state-approved General Educational Development (GED) programs, and pursuing a job.

Are they leaving certain districts?

- ◆ School districts with the largest enrollments (50,000 or more students) had the highest average dropout rate, at 2.1 percent.
- ◆ Generally, districts with lower student passing rates on the Texas Assessment of Academic Skills (TAAS) had higher dropout rates.

How do we compare nationally?

- ◆ Based on the Current Population Survey, an estimated 4.6 percent of students in Grades 10-12 dropped out of school across the nation.
- ◆ Texas had one of the lower dropout rates out of 32 states that met required Common Core of Data collection standards for school year 1996-97.

1997-98 Report on Texas Public School Dropouts

Executive Summary

In compliance with Texas Education Code (TEC) §39.182, the Texas Education Agency (TEA) prepares an annual report on dropouts in Texas public schools. As in past years, the 1997-98 report includes historical dropout data; a summary of dropout rates based on school district characteristics; and a listing of annual dropout rates broken down by county, district, and campus. This year's report also offers new information in response to recent concerns about dropout-related statistics.

- For the first time, the report presents an *actual* (rather than estimated) statewide longitudinal dropout rate, as well as actual longitudinal rates for individual districts and for high schools (Grades 9-12).
- The report contains information about an unadjusted attrition rate for all Texas public school students.
- The text was updated to reflect use of the "leaver record," a new data collection instrument.

In addition to these revisions, a companion report on high school completion was published. This document presents detailed information regarding high school completion rates on a statewide and district-level basis, thus providing additional context for the contents of the dropout report.

A total of 27,550 Texas public school students in Grades 7-12 were reported to have dropped out in 1997-98. This represents a statewide annual dropout rate of 1.6 percent, unchanged from the 1996-97 rate (TEA, 1998b). One of the objectives of public education is that, through enhanced dropout prevention efforts, all students will remain in school until they obtain high school diplomas (TEC §4.001). The target set in law was to reduce the annual and longitudinal dropout rates to 5 percent or less by the 1997-98 school year (TEC §39.182).

An examination of the characteristics of 1997-98 dropouts and their education programs reveals that more than 75 percent of the students who left school that year were overage for grade. Males were more likely to drop out than females,

and Hispanics had the highest average dropout rate of all ethnic groups. The largest number of dropouts was found in 9th grade, whereas the highest dropout rate was found among 12th graders. Fewer than 40 percent of 1997-98 dropouts were identified as at risk of dropping out of school the year they dropped out. Some reasons cited for dropouts leaving school included poor attendance, entering non-state-approved General Educational Development (GED) programs, and pursuing a job.

At the district level, dropout rates tend to vary based on characteristics such as community type, enrollment, and student performance. For example, urban school districts with large student enrollments and other central city districts generally had the highest dropout rates in 1997-98. Districts with lower student performance on the Texas Assessment of Academic Skills (TAAS) test had higher dropout rates on average than high-performing districts.

Nationally, the 1997 annual dropout rate for students in Grades 10-12 was an estimated 4.6 percent, representing almost one-half million students. As in Texas, Hispanic students had the highest dropout rate in the country.

To provide a basis for state-by-state comparisons, the National Center for Education Statistics (NCES) developed a definition of “dropout” that could be adopted and implemented by all states. Through the Common Core of Data collection, 32 states submitted data that met quality and comparability standards required to publish state estimates for 1996-97. Texas, at 3.6 percent, had one of the lower dropout rates. This rate was higher than the reported state rate of 1.6 percent, primarily due to differences in the dropout definitions and methodologies used by NCES and the State of Texas. Other rates that year ranged from a low of 2.7 percent to a high of 11.6 percent.

Data Collection and Dropout Methodology

Every fall, each district is required to report information via the Public Education Information Management System (PEIMS) for all students in Grades 7-12 who left that district during or after the previous school year. Prior to the fall of 1998, districts only reported graduates and dropouts; beginning fall 1998, they were required to report *all* students who left the district and provide the reasons each student left. This includes graduates, dropouts, students who transferred to other school districts, and students who left the Texas public school system for other reasons. Based on the reasons provided for each student's departure from school, a list of reported dropouts is generated using the criteria shown below.

Students in the following categories are identified as dropouts in the state's integrated accountability system.

- A student who is absent without approved excuse or documented transfer and does not return to school by fall of the following school year
- A student who completes the school year but fails to reenroll the following school year
- A student who leaves school to enter the military before graduation
- A student from a special education, ungraded, or alternative education program who leaves school
- A student who leaves school and enters a program not qualifying as an elementary/secondary school (e.g., cosmetology school)
- A student enrolled as a migrant, whose whereabouts are unknown

Students whose records are coded with certain reasons for leaving a school district are not counted as dropouts for accountability purposes (see pp. 4.132-4.134 of the *1998-99 PEIMS Data Standards* [TEA, 1998a]). Among the students who must be reported as leavers, but are not included in the dropout count for accountability purposes, are the following.

- A student who dies
- A student showing regular attendance at a state-approved alternative program
- A student enrolled as a migrant who subsequently has a school enrollment record (i.e., a New Generation System (NGS) education record is available)
- A student known to have transferred to another public school, an adult or alternative education program, or home schooling
- A student who leaves school to enroll in college early
- A student transferred or assigned to another public institution or state-approved educational program
- A foreign student who leaves school to return to his or her home country

Students who drop out before 7th grade are excluded from the PEIMS reporting requirements; similarly, students who are absent for temporary periods with approved excuses do not need to be reported to the Texas Education Agency (TEA) as school leavers.

In 1990-91, TEA began an automated statewide process to appropriately exclude some reported dropouts from computations for accountability purposes. The process has expanded over the years. Currently, a reported dropout's record is not counted for accountability if the student:

1. has remained enrolled in public school somewhere in the state, according to the school district attendance and enrollment information provided through PEIMS;
2. has received a General Educational Development (GED) certificate and appears on the GED information file at the time these procedures are executed;
3. has graduated within the last year; or
4. was identified as a dropout at any time back to the 1990-91 school year. For the purpose of the annual dropout rate, a student will be counted in the integrated accountability system as a dropout only once in his or her lifetime, even if the student drops out repeatedly. This helps assure that districts and campuses with aggressive dropout recovery programs are not penalized by a relatively higher likelihood of repeated dropout episodes by the same students. For the longitudinal dropout rate, however, the student's final status – whether as a first-time or repeat dropout – will determine if he or she is counted as a dropout.

In 1997-98, the process excluded records for 12,030 students who were not counted as dropouts in computing the annual dropout rate. Table 1 presents the number and percentage of students whose records were excluded from the dropout count, for each of the relevant criteria.

Dropout and Completion Rate Definitions

Dropout rates are based on the number of individuals in a given student population who drop out of school during a specified period. But, because the definition of a dropout, the student population under consideration, and the time period for counting dropouts can vary, a multitude of definitions exist. In Texas, a statewide definition of the term “dropout” was developed for PEIMS reporting purposes. TEA has consistently reported an annual dropout rate for students in Grades 7-12. This year, for the first time, TEA is also reporting actual longitudinal dropout rates for the cohort of students who began 7th grade in 1992-93, following them through 1997-98, their expected graduation year. Listed below are explanations of a variety of commonly-referenced dropout-related rates.

Reason for Exclusion	Frequency	Percentage
Moved to another district	5,021	41.7%
Duplicate reporting	2,386	19.8%
Dropout in a previous school year	2,105	17.5%
Received a GED certificate	2,034	16.9%
Not ADA eligible	135	1.1%
Withdrew to enroll in an approved alternative program	115	1.0%
Other leaver reason	111	0.9%
Graduated	85	0.7%
Expelled for criminal behavior	28	0.2%
Returned to home country	6	0.1%
Met all graduation requirements but failed Exit TAAS	3	0.0%
Withdrew to enter college	1	0.0%
Total Excluded	12,030	100.0%

Source: TEA PEIMS (1997-98)

Annual Dropout Rate

The annual dropout rate in Texas is calculated by dividing the number of dropouts over a full school year by cumulative attendance that same year in Grades 7-12. Cumulative attendance is the count of all students reported in attendance during any six-week reporting period. If a student enrolls on several campuses during a school year, the student is counted in attendance at every campus on which he or she is enrolled. However, when aggregating dropout information, the student is counted only once at the campus, district, county, region, and state levels. Cumulative attendance more closely parallels the required reporting by each campus of dropouts counted over the entire school year, regardless of how late in the year the students had first enrolled in the school.

Actual Versus Projected Longitudinal Dropout Rate

Texas has enough years of student-level data to follow a cohort of students from 7th grade through 12th grade. Actual longitudinal dropout rates for this grade span are calculated by counting all students whose final status in PEIMS is either as a first-time or repeat dropout, and dividing that total by the cumulative attendance in Grades 7-12. These rates are reported at the state, county, and district levels (see Appendix C). Secondary campuses vary quite a bit in the grade levels they serve, and these can change over time, particularly as districts open new schools. For these reasons, actual longitudinal rates reported at the campus level are limited to high schools that had served only Grades 9-12 during the entire cohort period (see Appendix D).

Actual longitudinal dropout rates are based on six years' worth of existing PEIMS data at the individual student level. Projected longitudinal dropout rates currently are based on an examination of historical data, in combination with professional judgment, although a technical method based on successive cohorts of existing data (as much as are available for each) will be developed this coming year.

Completion Rate

Another longitudinal measure of school success is the calculation of a completion rate, where the progress of students in a given cohort is followed across academic years through their expected graduation year. High school completion rates for 1995-96 and 1996-97 were reported in the Academic Excellence Indicator System (AEIS) for the first time in 1998. TEA completion rates are calculated by following a cohort of students from 9th through 12th grade and determining the percentage of students in the cohort who graduated, earned a GED certificate, or were still enrolled toward completion in the fall after their expected graduation date.

One of the advantages of reporting a completion rate is that it measures success rather than failure (i.e., dropping out). Completion rates should not be simplistically viewed as the complement of the actual or estimated longitudinal dropout rate, however. As calculated for the integrated accountability system, TEA completion rates are based on Grades 9-12; whereas, the annual and longitudinal dropout rates are computed across Grades 7-12.

Attrition Rate

Another way to think about measuring dropouts is to calculate an attrition rate. The attrition rate compares the difference between 9th-grade enrollment in Year 1 with 12th-grade enrollment four years later, often with a mathematical adjustment made for enrollment growth, and can be easily calculated at the campus, district, county, and state levels. As such, attrition rates do not distinguish among all the possible

reasons for the difference in enrollment figures. For example, losses from enrollment in a lock-step progression could reflect grade-level retention, transfers to other states or private schools, deaths, and/or dropouts.

Comparison of Commonly-Referenced Longitudinal Rates

The two longitudinal rates based on TEA student-level data over a specified time frame yielded similar results. The longitudinal dropout rate (Grades 7-12) for 1997-98 was 14.7 percent, while the 1997-98 completion rate (Grades 9-12) was 91.4 percent. Completion rates and longitudinal dropout rates are not the mathematical inverse of each other, though they are conceptually complementary. As defined and calculated by TEA, different grade spans are used for the two rates. Another difference is that completion rates are based on enrollment records, whereas longitudinal dropout rates are based on cumulative attendance records.

For 1997-98, the four-year unadjusted attrition rate was 36.0 percent. The attrition rate, unlike the completion and longitudinal dropout rates, is based on aggregate rather than student-level data and yielded a much different view of students' longitudinal progress. Again, this is presumably due to the attrition rate's inability to distinguish between a wide array of student experiences, only some of which should be thought of as unsuccessful. In calculating the 1997-98 attrition rate, for example, all students in the cohort who were retained in grade, transferred to other educational settings in Texas (e.g., private or home schooling), transferred to other states or countries, or earned GED certificates were treated as "lost" from the system (i.e., as dropouts).

State Dropout Rates

The total number of dropouts in Grades 7-12 for the 1997-98 school year was 27,550. This represents an increase of 649 students from the 1996-97 school year. As shown in Table 2 on page 8, the 1997-98 annual dropout rate was 1.6 percent, the same as the previous year's rate. The actual longitudinal dropout rate for Grades 7-12 was 14.7 percent.

As in past years, dropout rates among certain ethnic minorities remained significantly higher than the overall dropout rate. The annual dropout rate for Hispanic students in 1997-98 remained at 2.3 percent, while African American students had a 2.1 percent annual dropout rate (an increase of 0.1%). All other student groups had dropout rates that were lower than the overall state rate. The dropout rates by gender also are presented in Table 2. As in previous years, the dropout rate for males was slightly higher than for females (1.6% and 1.5%, respectively).

The actual longitudinal dropout rates for Hispanic and African American students (20.4 percent and 18.9 percent, respectively) were also higher than the rates for other

Table 2. 1997-98 Dropout Rates by Ethnicity, Gender, and Grade Level					
	Enrollment in Grades 7-12	Total Dropouts	Percentage of Total Dropouts	Annual Dropout Rate	Longitudinal Dropout Rate
Ethnicity					
White	828,660	7,734	28.1%	0.9%	9.0%
African American	244,987	5,152	18.7%	2.1%	18.9%
Hispanic	619,855	14,127	51.3%	2.3%	20.4%
Other	49,637	537	1.9%	1.1%	7.6%
Gender					
Male	897,223	14,730	53.5%	1.6%	15.8%
Female	845,916	12,820	46.5%	1.5%	13.5%
Grade Level					
7	313,673	1,090	4.0%	0.3%	N/A

10	285,040	5,631	20.4%	2.0%	
11	239,139	5,038	18.3%	2.1%	
12	229,210	5,995	21.8%	2.6%	
Total	1,743,139	27,550	100.0%	1.6%	14.7%

Source: TEA PEIMS (1997-98) *Calculated from Annual Dropout Rate

groups. The actual longitudinal rate for White students was 9.0 percent. Achieving a longitudinal rate of 5 percent (a goal first established by the legislature in 1984) is still a significant challenge for these groups of students and the educators working with them.

Table 2 also shows the dropout rates by grade level for the 1997-98 school year. At 2.6 percent, the annual dropout rate was highest among 12th-grade students, followed by 9th and 11th graders at 2.1 percent. This is the second consecutive year that 12th graders had the highest dropout rate. In terms of raw numbers, however, more students still dropped out in 9th grade.

Table 3 presents dropout rates for Grades 7-12 by ethnicity. Unlike past years, among Hispanic students, as well as with White and African American students, the dropout rate was highest in Grade 12.

Characteristics of Dropouts

Many factors have been shown to be related to students' dropping out of school. Basic demographic characteristics, family and personal background, a student's academic history, and characteristics of the student's school all may influence whether or not a student will stay in school. Table 4 on page 10 and Table 6 on page

12 each present a three-year history of annual Texas dropout information by various student characteristics. An ethnic profile of dropouts covering the last 10 years of available data is presented in Table 8 on page 15.

Table 4 indicates that, compared with their counterparts the year before, economically disadvantaged students in 1997-98 made up larger percentages of both total enrollment and total dropouts in Grades 7-12. Despite these increases, however, the annual dropout rate for this group remained at 1.6 percent, the same as the overall state rate.

Table 4 on page 10 also shows dropout statistics for at-risk students. Under Texas Education Code (TEC) §29.081, school districts must identify certain students as at risk of school failure or of dropping out. These include each student in Grades 7-12 who:

1. was not advanced from one grade level to the next for two or more school years;
2. is at least two years below grade level in reading or mathematics;
3. has failed at least two courses and is not expected to graduate within four years of entering 9th grade;
4. has failed at least one section of the most recent TAAS exam; or
5. is pregnant or is a parent.

These indicators, which concentrate on a student's academic history, may not identify those students at risk either due to family and personal situations, or due to other school-related

Table 3. 1997-98 Dropout Rates by Grade and Ethnicity					
Grade	African American (Dropouts/ Enrollment)	Hispanic (Dropouts/ Enrollment)	Other (Dropouts/ Enrollment)	White (Dropouts/ Enrollment)	Total (Dropouts/ Enrollment)
7	0.4% (197 / 43,976)	0.5% (596 / 114,527)	0.2% (19 / 8,259)	0.2% (278 / 146,911)	0.3% (1,090 / 313,673)
8	0.8% (339 / 42,353)	1.0% (1,163 / 110,965)	0.6% (52 / 8,386)	0.3% (492 / 143,227)	0.7% (2,046 / 304,931)
9	2.5% (1,388 / 54,943)	3.1% (4,551 / 146,840)	1.3% (128 / 9,501)	1.1% (1,683 / 159,682)	2.1% (7,750 / 371,146)
10	2.4% (953 / 39,119)	3.0% (2,971 / 98,369)	1.3% (107 / 8,536)	1.2% (1,600 / 139,016)	2.0% (5,631 / 285,040)
11	2.8% (889 / 31,852)	3.0% (2,314 / 75,911)	1.3% (102 / 7,595)	1.4% (1,733 / 123,781)	2.1% (5,038 / 239,139)
12	4.2% (1,386 / 32,744)	3.5% (2,532 / 73,243)	1.8% (129 / 7,360)	1.7% (1,948 / 115,863)	2.5% (5,995 / 229,210)
Total	2.1% (5,152 / 244,987)	2.3% (14,127 / 619,855)	1.1% (537 / 49,637)	0.9% (7,734 / 828,660)	1.6% (27,550 / 1,743,139)

Dropout Rate	1.3%	1.1%	1.0%

Source: TEA PEIMS (1995-96 – 1997-98)

characteristics. As applied by school districts, the criteria resulted in 32.6 percent of students in Grades 7-12 being identified as at risk for 1997-98, down slightly from 1996-97. Yet, only 37.8 percent of 1997-98 dropouts were identified as at risk of dropping out during the year they actually dropped out of school. Moreover, the dropout rate for at-risk students was just slightly higher than the overall state rate. Of students who graduated in 1997-98, more than one-fourth (27.5%) were identified as at risk of dropping out of school.

Information is available on the number of dropouts identified as overage for their assigned grade levels. Students who, at the time they drop out, are neither on grade level nor participating in special education programs usually have been retained in at least one grade. As Table 4 indicates, 77.1 percent of dropouts in 1997-98 were overage for grade, compared to 30.4 percent of all students in Grades 7-12. Table 5

shows that, while dropouts that year ranged in age from 10 to 21, a little more than 75 percent left at age 16 or older. Those 19 and 20 years of age had the highest dropout rates of the age range examined.

Table 6 on page 12 presents dropout information for students receiving various educational services, including participants in special, bilingual, and vocational education programs. Compared to 1996-97, students in special education represented a larger share of total enrollment in 1997-98; however, their dropout rates declined from previous years. The rate at which special education students left school decreased from 2.1 percent in 1995-96 to 1.8 percent in 1997-98. Dropout rates for students in bilingual and vocational programs also declined during the same period, by 0.6 and 0.2 percentage points, respectively.

Reasons for Dropping Out

School districts recorded specific reasons for leaving school for 50.8 percent of the 1997-98 dropouts (see Table 7 on page 13). Of these 14,002 students, 55.1 percent were reported to have withdrawn because of school-related concerns, such as poor attendance or failing grades; 12.4 percent because of job-related concerns, such as pursuing a job or joining the military; 8.1 percent because of family-related concerns, such as pregnancy or marriage; and another 23.2 percent because of other concerns, such as age, homelessness, or enrollment in an alternative program that is not leading

Table 5. 1997-98 Dropout Rates by Age

	Enrollment in Grades 7-12	Percentage of Enrollment	Total Dropouts	Percentage of Dropouts	Dropout Rate
September 1 Age					
10	78	0.01%	2	0.01%	2.6%
11	6,259	0.4%	75	0.3%	1.2%

to a high school credential. Table 7 shows that 48.2 percent of dropouts left school because of poor attendance, though the reasons for poor attendance are not known.

The data also suggest some differences in the reasons males and females drop out of school. According to district reports, for instance, over two times as many males as females dropped out to pursue jobs. Females, on the other hand, were more likely than males to leave because of family-related concerns. Almost 9 percent of females were reported to have dropped out to get married, compared with fewer than 2 percent of males.

District Characteristics

Texas school districts can differ greatly with regard to characteristics such as community type, district size, student performance, and expenditures. In turn, these district-level characteristics may relate to the dropout rates for individual campuses. Appendix A includes a list of dropout rates by district characteristics.

Generally, school districts are grouped into eight categories based on the types of communities in which they are located. Charter school districts, however, constitute a separate category. Factors such as proximity to a metropolitan area, size, and

growth rate are used to determine the appropriate category for each district. (For a complete list of community types and their definitions, refer to Appendix A.) Dropout rates tend to be higher in school districts located in urban areas, and lower in rural and nonmetropolitan fast growing areas. One factor in this variation may be that minority students are found in greater numbers in the urban areas, and these students are already known to drop out of public schools at higher rates than their nonminority peers.

Higher dropout rates are also found among districts with the largest enrollments, most of which, again, are located in urban areas. Appendix A shows that, in 1997-98, districts with student enrollments over 50,000 (all of which are considered major urban districts) had the highest average dropout rate, at 2.1 percent. However, districts with enrollments under 500 did not have the lowest dropout rate. The annual dropout rates for these small districts averaged 1.9 percent, compared to 1.6 percent in 1996-97. The State Board of Education approved 16 open-enrollment charter school districts for operation during 1996-97 and another three charter districts in 1997-98. Charter schools are subject to fewer state laws than other public schools, and most are specifically designed to serve students at risk of academic failure or dropping out. As these schools are not part of existing districts, their data were examined separately in this analysis. The overall annual dropout rate for this group was 15.6 percent, up from

**Table 7. Top 10 Reasons for Dropping Out of School,
as Reported by School Districts for 1997-98**

Reasons for Dropping Out	Total	Gender		Ethnicity			
		Male	Female	African American	Hispanic	Other	White
Poor attendance	48.2%	48.2%	48.3%	53.1%	44.7%	55.8%	50.4%
Enter alternative program, not pursuing diploma	16.3%	17.4%	15.0%	19.2%	14.4%	10.2%	17.9%
Pursue a job	12.4%	16.3%	7.7%	6.7%	15.9%	10.6%	10.6%
Because of age	6.3%	6.3%	6.4%	9.0%	6.3%	12.0%	4.3%
To get married	4.9%	1.7%	8.7%	0.5%	8.0%	1.8%	2.8%
Pregnancy*	3.2%	—	6.8%	1.9%	3.5%	0.9%	3.6%
Low or failing grades	2.7%	2.9%	2.5%	2.3%	1.7%	2.7%	4.5%
Expelled, non-criminal behavior	2.4%	3.3%	1.2%	3.0%	2.2%	1.3%	2.2%
Failed exit TAAS/not met all graduation requirements	1.8%	1.6%	2.0%	2.3%	1.8%	1.8%	1.4%
Homeless, or non-permanent resident	0.6%	0.6%	0.7%	0.4%	0.7%	0.0%	0.8%

Source: TEA PEIMS (1997-98). * Females Only.

10.9 percent in 1996-97. Given the distinctly different characteristics of the students served by charters, compared with the state as a whole, their relatively higher dropout rate is not unexpected.

Appendix A also shows dropout rates among school districts based on student performance. Districts are grouped according to the percentage of students passing all Texas Assessment of Academic Skills (TAAS) tests taken. As the percentage of students passing all TAAS tests increases, the dropout rate decreases. The 210 districts with under 72.5 percent of their students passing all TAAS tests taken in 1997-98 had an average dropout rate of 2.3 percent, compared to 0.6 percent in districts with at least 88.2 percent of students having passed the TAAS.

The resources of school districts and campuses have been considered a factor in the ability to supply needed support services for students at risk of dropping out of school. However, in 1997-98, there was not a direct relationship between average operating costs per pupil and dropout rate. School districts with below average operating costs per pupil had low dropout rates, at 1.4 percent, but those with above average operating costs per pupil had the lowest dropout rate (0.9%). School districts with average operating costs per pupil had the highest dropout rate (2.0%), while districts with the highest operating costs had a slightly lower rate (1.9%).

Trends in State Dropout Rates

Between 1988-89 and 1996-97, the number of reported dropouts declined steadily by more than 67 percent (see Table 8). Significant reductions are attributed to the response of students, parents, and educators to use of the dropout rate as a performance indicator in the state accountability system. During the first few years of dropout data collection, improvements to school district student data management systems probably contributed to some of the overall reduction in identified dropouts. The 1990-91 and 1992-93 reductions also reflect, in part, enhancements to the statewide dropout recovery system. The decline in the number of dropouts reported in 1994-95 can be partially attributed to changes in the dropout definition and recovery system, such as not including in the count seniors who failed exit-level TAAS but passed all other graduation requirements.

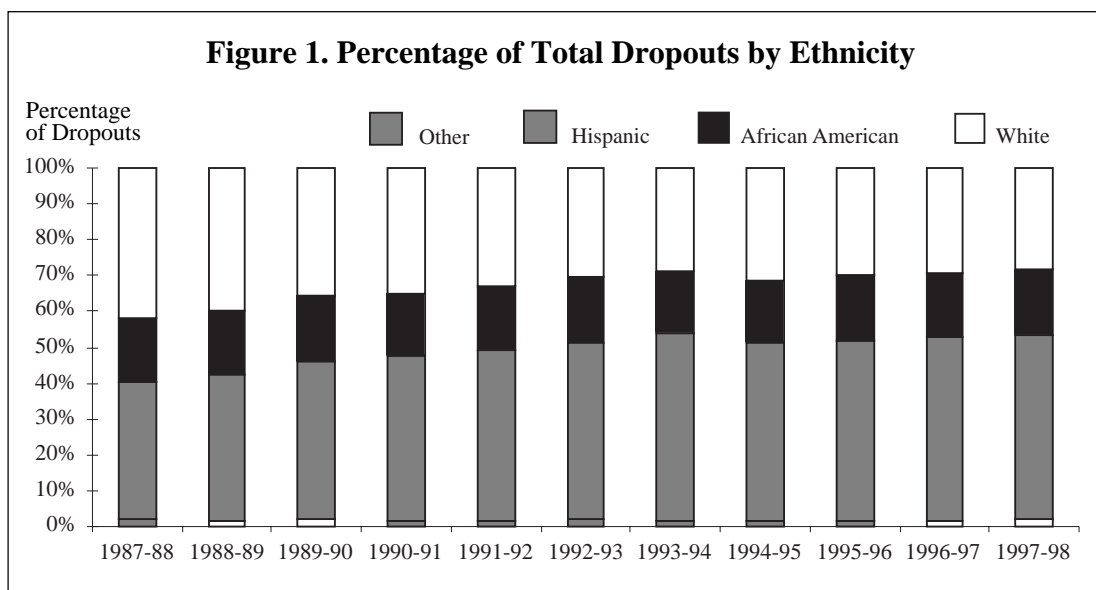

In 1997-98, the number of dropouts (27,550) rose for the first time since TEA began collecting dropout information. The new PEIMS leaver record, implemented in fall 1998, is providing greater detail on students who leave the Texas public education system. School districts are required to report leaver information for all students who were in attendance in Grades 7-12 in the previous school year but not enrolled in the same district in the fall.

While the number of dropouts showed a slight increase since 1996-97, the statewide annual rate (1.6%) remained the same, because total enrollment for Grades 7-12 had also increased. Minority students in 1997-98 continued to comprise a higher percent-

(Continued from page 14)

age of total dropouts than of enrollment. As Figure 1 shows, Hispanic students have made up the greatest percentage of dropouts since 1988-89. Overall, the percentage of total dropouts represented by African American students rose 1.1 percentage points from 1996-97, whereas the percentage represented by Hispanic students decreased slightly.

Figure 2 shows the percentage of dropouts by grade level from the 1987-88 school year to the 1997-98 school year. While students in the 9th grade consistently represent the largest number of dropouts (i.e., the highest percentage of total dropouts), students in the 12th grade are steadily increasing as a percentage of total dropouts, with the exceptions of 1989-90 and 1994-95. In 1987-88, students in the 12th grade represented almost 12 percent of all dropouts, while in 1997-98 they represented almost 22 percent of all dropouts. The current percentage represents an increase of approximately 83 percent over the 12th-grade dropout rate of 11 years ago. Twelfth graders also had the highest annual dropout rate in 1997-98, at 2.6 percent (see Table 2 on page 8). The number of dropouts increased in Grades 7, 8, 11 and 12 from 1996-97 to 1997-98, while they decreased in Grades 9 and 10.

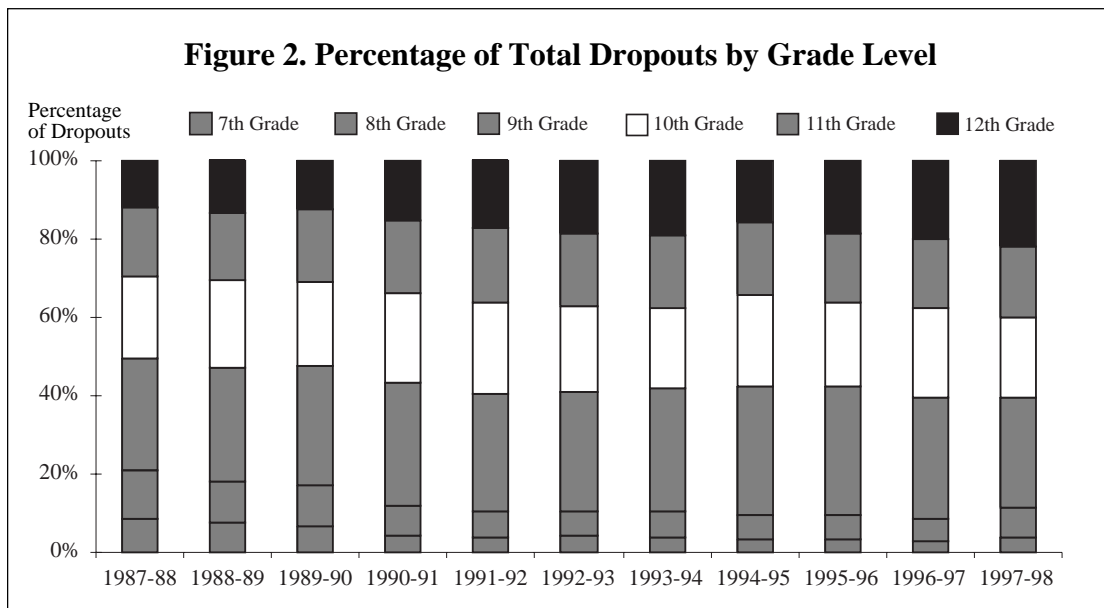

Projected Cross-Sectional and Longitudinal Dropout Rates

Texas Education Code §39.182 requires TEA to calculate five-year projections of cross-sectional and longitudinal dropout rates for Grades 7-12, with the assumption that no state action is taken to reduce the dropout rate. Projected dropout rates by grade level are calculated by applying the current year ethnic dropout rates to the population for each ethnic group within grade level as current grade levels are incremented for each projected year. That is, the first step in determining the

projected 1998-99 rate is to represent all students who were in Grades 6-11 in 1997-98 as 7th-12th graders for 1998-99. The 1997-98 ethnic dropout rates are applied within each incremented grade level and then summed to yield the projected rates for 1998-99. For the next projected year, 1999-2000, the same process is now applied to 5th-10th graders who have progressed to Grades 7-12. This method continues for each cohort through the year 2003-2004 and is based on the assumption that current ethnic dropout rates will remain constant from year to year.

The agency now has sufficient years of cohort data available in PEIMS to calculate an *actual* rather than estimated longitudinal dropout rate. That is, beginning with a cohort of 7th graders in 1992-93, all students who subsequently dropped out by the end of 1997-98 (the cohort's anticipated graduation year) were identified. That same school year was also the first year that leaver record data were used to collect information about dropouts, along with all other types of school leavers (graduates, transfers, etc.). Until school districts gain at least another year's experience in collecting and reporting leaver record data, it will be difficult to gauge the extent to which projected annual and longitudinal rates may be affected by the change in collection method.

Thus, *projected* longitudinal dropout rates in this year's report were prepared using a much more generalized method than was used in the past, and were adjusted on the basis of professional judgment by staff working with the data. It is common practice to rely on one or more prior years' worth of data in developing projections for future years on any given performance indicator. In this instance, multiple years of annual dropout rates are available, but the actual longitudinal dropout rate across Grades 7-12 has only been prepared once, this year. Given the absence of historical data, the mean rate of decline in the annual dropout data over the past four years was

Source: TEA PEIMS (1987-88 – 1997-98)

determined (four years' worth of data were used because this constituted a reasonable number of data points, and because the data for these four years exhibited the greatest continuity in methodology). This mean rate of decline was assumed to be constant and then multiplied by a factor of six to gauge the net decline in annual dropout rates one might expect to observe from year to year for a given 7th-grade cohort followed through their anticipated 12th-grade year. Then, this value was subtracted from the known, current actual longitudinal dropout rate to obtain a projection for next year. This last process was repeated for projections in subsequent years. A technical method based on successive cohorts of existing data (as much as are available for each) will be developed this coming year.

As shown in Table 9, grade-level dropout rates reflect higher dropout rates in the 11th and 12th grades. The longitudinal dropout rate is projected to decrease steadily through school year 2003-04.

An Update to the National Dropout Rate

The National Center for Education Statistics (NCES), with representatives from state and local education agencies and professional associations, developed a definition of "dropout" that could be adopted and implemented by all states. In 1992-93, NCES began collecting dropout data under the new definition through the Common Core of Data (CCD). The CCD is a standard set of data that NCES collects from every state annually. As of the 1996-97 school year, 32 states had submitted data that met quality and comparability standards required to publish state estimates. Table 10 presents 1996-97 dropout rates, as reported by NCES (Hoffman, 1999).

Table 9. Projected Dropout Rates by Grade						
Annual Dropout Rate

Source: 1996-97/1997-98 Public Elementary/Secondary School Agency Universe Survey, National Center for Education Statistics, May 1999

* National comparison dropout rates are based on the Common Core of Data (CCD) universe collection.

** This rate was higher than the reported state rate of 1.6 percent, primarily due to differences in the dropout definitions and methodologies used by NCES and the State of Texas.

As indicated in Table 10, Texas had a national comparison dropout rate of 3.6 percent in 1996-97. This rate was higher than the reported state rate of 1.6 percent, primarily due to differences in the dropout definitions and methodologies used by NCES and the State of Texas. The state's methodology is more comprehensive in nature, likely reflecting availability of more data than in other states. For example, fall "snapshot" enrollment data are required for the NCES methodology, while Texas has the capacity to examine attendance over the course of the full school year. Such information cannot be accommodated by NCES because it would preclude comparability of the resulting dropout rates. It is worth noting that the national comparison rate for Texas was one of the lower ones on the list of 32 states.

National Annual Rates

NCES publishes national annual and longitudinal dropout rates based on survey data. The surveys provide a consistent picture of national and regional dropout rates over time. However, the rates are not consistent with those calculated for Texas, and the surveys do not employ samples large enough to provide state-representative findings (Hoffman, 1995).

The national annual rates based on the Current Population Survey conducted by the U.S. Census Bureau are presented in Table 11. Dropouts are defined as those 15- through 24-year-olds not currently enrolled in school, who were enrolled a year ago,

Table 11. Estimated National Dropout Rates for Grades 10-12 as of October 1997			
	Total Dropouts (Thousands)	Percentage of Total Dropouts	Annual Dropout Rate
White	243	53.4%	3.6%
African American	77	16.9%	5.0%
Hispanic	119	26.3%	9.5%

Note: Details may not add to totals because of rounding.

and are not high school graduates. From these data, NCES estimates the total number of dropouts nationally for Grades 10-12.

As of October 1997, an estimated 4.6 percent of students in Grades 10-12 dropped out of school, representing almost one-half million students. Table 11 presents national dropout rates by ethnicity, gender, and age. The highest dropout rates are found among Hispanic students and students aged 20-24 years old.

National Longitudinal Rates

With the National Education Longitudinal Study of 1988 (NELS:88), NCES began surveying 8th-grade students. The survey follows the progress of these students as they continue to postsecondary education or enter the labor force. The cohort of 8th graders in the survey was scheduled to graduate at the end of the 1991-92 school year. Following the 1988 base-year data collection, these students were interviewed every two years through 1994. Based on information from interviews conducted the last year, 89 percent of the cohort had completed regular high school programs by the summer of 1992. In addition, 2.5 percent had completed alternative credentials, 0.1 percent had received certificates of attendance, and 5.5 percent were still enrolled in high school programs of some type.

Dropout Prevention Strategies

As Table 7 on page 13 shows, students drop out for many reasons, and rarely is the decision to leave a snap judgment. The literature views dropping out of school as a process that begins with a student gradually “withdrawing or disengaging” from school and then finally dropping out (Hahn, Danzberger, & Lefkowitz, 1987; Tomlinson, Frase, Fork, & Gonzalez, 1994). Sometimes this disengagement begins in the early grades (elementary or middle school), with the student finally dropping out in high school. To fully comprehend the dropout process, one would have to simultaneously examine the personal life of the student, the school and its local policies and practices, and the state and federal policies that shape the social and educational views of the nation.

Although it is difficult to determine the exact time a student decides to drop out of school, most prevention programs are implemented at the high school level. Even though not all dropouts are identified as at risk of dropping out (in Texas, for example, fewer than 40 percent of all 1997-98 dropouts were identified that year as being at risk, using criteria set in law), the majority of dropout prevention efforts across the nation are aimed at students with certain attributes associated with “at risk” status (Hahn et al., 1987; Tomlinson et al., 1994). These attributes commonly include (a) minority status, (b) low-income status, (c) low academic achievement, (d) pregnancy, and (e) being overage for grade.

Prevention programs can vary tremendously in terms of the populations being targeted for services, in the scope and kinds of services offered, and the service delivery mechanisms used. Most of the literature concerning dropout prevention involves evaluations of specific programs to answer the question “Did this program work?” rather than “Why did this program work?” (O’Sullivan, 1990; Paredes, 1996; Wilkinson & Griffith, 1994; and Wilkinson & Mangino, 1994). However, examining successful programs permits identification of strategies commonly employed to deter students from dropping out (Callison, 1994; Cardenas, Robledo, & Supik, 1986; Duckenfield, Hamby, & Smink, 1990; Hahn et al., 1987; Ramirez, 1990; Sims, 1997; TEA, 1989). These strategies include the following.

- * **Individualized instruction.** Individualized instruction in dropout prevention programs capitalizes on students’ unique learning styles and interests and allows them to learn at their own pace and ability level.
- * **Remediation and/or accelerated instruction.** Successful dropout prevention programs remediate students in basic academic skills and/or bring students up to grade level by the end of the program. This instruction may include one-to-one tutoring, distance learning opportunities, and access to computer hardware and software. Vocational programs may be part of the instructional program.
- * **Counseling and Mentorship.** Dropout prevention counseling targets not only academic issues, but also social and survival skills, study skills, and employment skills. Counseling is geared to individual students’ needs and culture. One of the potentially effective strategies for a successful dropout prevention program is one-to-one involvement with a mentor. Mentors serve as role models by providing the necessary adult attention and support that will encourage the students to finish school and plan for the future.
- * **Flexibility in programming and scheduling.** Dropout prevention programs serve diverse populations with diverse needs. Therefore, they are flexible about course sequences, course length, classroom structure, and class schedules. Programs may accommodate students’ work schedules or other factors, and could involve evening, after school, and/or summer school options.
- * **Trained and committed staff.** Successful dropout prevention programs are staffed by individuals who are committed to at-risk teens, have high expectations, and are dedicated to program plans and goals with specific time lines. Staff are also trained in tailoring instruction to meet individual student needs.
- * **Parental involvement.** Parents play an important role in successful dropout prevention programs. They often act as mentors and tutors for the child and provide support to the teachers and school.

- * **Collaboration with the community and businesses.** Successful dropout prevention programs collaborate with the community and local businesses. Developing company mentorship programs with at-risk students links the importance of graduation and future employment opportunities. This collaboration may also involve work study, apprenticeship programs, and incentive programs.

- * **Matching services to needs.** Successful dropout prevention programs work with other governmental agencies to assure students' access to appropriate social services for their immediate needs, so that students in turn can concentrate on finishing school. These services can range from accessing employment-related benefits, to income assistance and day-care services for teenage parents.

Although these strategies show up repeatedly in successful dropout prevention programs, other programs have used additional strategies that have had a positive impact on dropout rates in communities across the nation, with an apparent “key” being the match between students' needs and local school/community circumstances. Some of these include offering work study programs, implementing year-round schools, offering rewards or incentives, and providing transportation to the program. Other prevention strategies have targeted special groups, such as second-language learners, or have provided quality early childhood education, which helps better prepare children for school (Duckenfield et al., 1990; Vaznaugh, 1995).

Because dropping out of school can be such a complex process, influenced by a student's ethnicity, socioeconomic status, home life, and academic history, it is important that a school or district first assess the profile of their dropouts before establishing prevention and recovery programs.

Appendix A
Texas Education Agency
1997-98 District Analyze Category Descriptions

Enrollment

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

District Type

Classification of school districts based on factors such as size, growth rates, and proximity to urban areas is listed below. Charter school districts are in a separate category.

Major Urban. The state's largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso areas.

Major Suburban. Other districts in and around the major urban areas.

Other Central City. Major districts in other large Texas cities.

Other Central City Suburban. Other districts in and around the other large, but not major, Texas cities.

Independent Town. Largest districts in counties with populations of 25,000 to 100,000.

Non-Metro: Fast Growing. Districts not fitting in any of the above categories but exhibiting a five-year growth rate of at least 20 percent with at least 300 students enrolled.

Non-Metro: Stable. Districts not fitting in any of the above categories but with an enrollment exceeding the state median.

Rural. Districts not fitting in any of the above categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

Charter School Districts. The open-enrollment school districts chartered by the State Board of Education. Charter schools operate in facilities of commercial or nonprofit entities or school districts.

Property Wealth

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year—i.e., 1997, as determined by the Comptroller's Property Tax Division (CPTD). Enrollment is for the 1997-98 school year. The first wealth grouping shows 10 categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping, with each category representing about five percent of the state's students. The special statutory and charter school districts without taxable property wealth form a separate group in all three wealth groupings.

Total Tax Effort

A four-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. Rates are expressed per \$100 of taxable value. The special statutory and charter school districts without property tax levies appear separately.

Maintenance and Operations Effective Tax Rates

A four-category tax effort grouping of districts showing the M&O effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rates shown include money generated by districts for equalizing wealth. The special statutory and charter school districts without property tax levies appear separately.

Highest Property Value Category

A four-category CPTD classification based on property use. A district is placed into the category that represents its greatest total property value. The special statutory and charter school districts without taxable property wealth form a separate group.

Residential. Single-family, multi-family, and residential inventory.

Land. Vacant lots and rural real property (taxable).

Oil and Gas. Oil, gas, and minerals.

Business. Commercial and industrial real property, commercial and industrial personal property, and utilities.

Small/Sparse Adjustment

A four-category grouping of districts based on the small/sparse adjustment amount as a percentage of the total adjusted basic allotment amount. A fifth category contains all districts receiving no small/sparse adjustment. The small/sparse percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts.

Cost of Education Index Level

A five-category grouping of districts based on the Cost of Education Index (CEI) level. It reflects geographic variations in costs and prices outside district control. The current index, which has a minimum value of 1.0 and a maximum of 1.2, was first implemented in 1991-92.

Operating Cost Per Student

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the school year expenditures divided by enrollment. The source for budgeted expenditures is the fall PEIMS submission.

Education Service Center Region

The state is divided into 20 geographic regions, each served by an Education Service Center (ESC). This category reflects the ESC region from which the district receives services, not the geographically assigned ESC region. For the vast majority of districts, these are the same.

TAAS: Percent Passing All Tests Taken

A five-category grouping of districts based on the percentage of students passing the 1998 Texas Assessment of Academic Skills (TAAS). For Grades 3-8 and 10, the total number of students passing all sections of the TAAS taken is expressed as a percentage of the total number of students taking one or more tests. This percentage (a) excludes special education students, and 3rd and 6th graders taking the test in Spanish; and (b) includes only those students in the district in October of the school year, which is the percentage used for accountability purposes. A sixth category refers to districts not administering the test.

SAT I/ACT: Percent Taking

A three-category grouping based on the percentage of 1996-97 graduates taking the SAT I and/or the ACT assessment. A fourth category is reserved for districts that had no graduates.

SAT I/ACT: Percent Scoring At or Above Criterion

A five-category grouping based on the percentage of 1996-97 examinees who scored at or above the criterion (1110 on the SAT I Total and/or 24 on the ACT Composite) on the SAT I and/or ACT. The number meeting the criterion is divided by the number of examinees. A sixth category is reserved for districts that had no examinees.

Student Density

A four-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB, now the CPTD), the Texas Education Agency, and the Texas Water Commission (TWC). Maps provided by districts to the SPTB were digitized by TWC to determine acreage. The special statutory and charter school districts without available mileage information form a separate group.

Enrollment Change from Prior Year

A five-category grouping based on the growth or decline in district student population over a one-year period. Districts with declining enrollment represent one category, while the remaining categories show one-year growth rates ranging from “0%-3%” to “10% and over.”

Percent African American, Hispanic, and Minority Students

Three six-category sets of groupings based on the ethnic composition of district student populations, as reported in PEIMS. Minority percentage is calculated as the sum of all non-White populations expressed as a percentage of the total. Non-White populations include American Indian or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

Percent Economically Disadvantaged Students

A six-category grouping based on the percentage of students enrolled in the district who are classified as economically disadvantaged in PEIMS as follows:

- a) eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
- b) from a family with an annual income at/below the federal poverty line;
- c) eligible for AFDC or other public assistance;
- d) recipient of a Pell Grant or comparable state need-based financial assistance program; or
- e) eligible for programs assisted under Title II of the Job Training Partnership Act.

Average Teacher Experience

A four-category grouping based on average years of teacher experience. This average is computed by taking the total years of professional experience for each district teacher, multiplying by each teacher’s full-time-equivalent (FTE) count, summing these products for the whole district, and dividing by the total teacher FTE count.

Average Teacher Salary

A four-category grouping based on average district teacher salary. This average is computed as the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include any other supplement.

Percent Minority Teachers

A six-category grouping based on the minority composition of district teaching populations. Minority percentage is calculated by summing all non-White teacher FTEs and dividing by the total teacher FTEs.

Percent Teachers with Advanced Degrees

A four-category grouping based on district percentage of teachers with advanced degrees. This percentage is computed as the FTE count of teachers with a master's or doctoral degree divided by the total teacher FTE count.
