

Problems and Solutions—TELPAS

As a testing coordinator, you should be available during test administrations to handle problems as they arise in your district or on your campus. You may encounter the following situations during test administrations.

Technical Emergencies

Problem: A campus coordinator reports that test administrators at her campus have received a warning screen stating that the testing server is not available.

Solution: If presented with a warning screen stating that the testing server is not available, test administrators should be told not to submit students' tests or mark tests as complete. Follow the instructions provided in the *TestNav 7 Combined Technical Guide* and consult with Pearson as needed.

In the event of a systemwide issue affecting many users, testing coordinators will hear a recorded message including system status and recommended actions.

Students' answers should not be submitted and students' tests should not be marked complete because of a technical issue without first receiving directions from Pearson's Austin Operations Center, which can be reached at 800-627-0225.

Schoolwide Emergencies

Problem: A campus coordinator wants to know what he should do when a fire alarm sounds during testing.

Solution: Remember that the safety of students and staff is the first consideration. The campus coordinator should have students leave their tests and go quietly outside, following the school's regulations for exiting the building. Testing staff should not instruct students to exit their tests. It is not necessary for the campus coordinator to call the district test coordinator or TEA to report the incident before ensuring the safety of students. Test administrators must closely monitor their testing groups to make sure no one discusses the test. The students should resume testing once the building has been cleared for reentry. The campus coordinator should report the event to the district test coordinator. If the emergency prevents students from resuming testing, the district coordinator should call TEA's Student Assessment Division at 512-463-9536 for guidance on how to proceed.

Lunch Breaks

Problem: Students in several classes at a campus have not completed the TELPAS reading test by lunchtime. The campus coordinator would like to give the students a lunch break.

Solution: Students may stop testing to take a supervised lunch. Online tests must be exited. Students must not be instructed to submit their tests at this time. Students must be monitored by trained testing personnel and are not allowed to discuss any test content during lunch.

Temporary Disabilities

Problem: A student with her arm in a cast arrives at the reading testing session. The campus coordinator wants to know whether the student should be excused from the test.

Solution: The student may not be excused. If the student can answer questions by using her unaffected arm, continue testing the student. If the student's situation is expected to change during the testing window, schedule a later test session or have the student complete the test with accommodations. Refer to the Accommodation Resources Page for information about allowable accommodations.

Years in U.S. Schools Unknown

Problem: A campus coordinator wants to know what to do if a student's number of years in U.S. schools is not known.

Solution: It is important for this information to be supplied accurately and consistently from year to year. It is used for instructional planning, STAAR assessment decisions, and accountability and performance-based monitoring measures. The campus coordinator should collaborate with the LPAC to obtain this information. Instructions for officially determining and documenting this information are included in the "Instructions for Years in U.S. Schools Data Collection" document on the LPAC Assessment Resources page.

Online Testing of Students in Different Grade Levels

Problem: A campus coordinator wants to know whether students in different grade levels can be grouped in the same electronic test session (i.e., placed on the same session roster in the Assessment Management System) and take the online test at the same time in the computer lab.

Solution: Students from more than one grade level can be placed into the same test session in the Assessment Management System only if they take the same grade cluster test. For example, it is acceptable to place students from grades 10–12 into the same test session because they take the same grade cluster test. Students in grade 9 cannot be placed in this test session because they take the grade 8–9 test. The Assessment Management System does not allow students to be placed into test sessions for a grade cluster test that does not correspond to their enrolled grade level in PEIMS. It is possible to have students from more than one grade cluster take an online test in the same room, but the test administrator will need to manage a separate test session in the Assessment Management System for each grade cluster test. In addition, there are some differences in the administration directions for some grade clusters that test administrators read aloud.

If you need assistance in handling unusual circumstances of any kind during the TELPAS administration window, call TEA's Student Assessment Division at 512-463-9536.
