SCIENCE STANDARDS

- *Standard I.* The science teacher manages classroom, field, and laboratory activities to ensure the safety of all students and the ethical care and treatment of organisms and specimens.
- *Standard II.* The science teacher understands the correct use of tools, materials, equipment, and technologies.
- *Standard III.* The science teacher understands the process of scientific inquiry and its role in science instruction.
- *Standard IV.* The science teacher has theoretical and practical knowledge about teaching science and about how students learn science.
- *Standard V.* The science teacher knows the varied and appropriate assessments and assessment practices to monitor science learning.
- Standard VI. The science teacher understands the history and nature of science.
- *Standard VII.* The science teacher understands how science affects the daily lives of students and how science interacts with and influences personal and societal decisions.
- *Standard VIII.* The science teacher knows and understands the science content appropriate to teach the statewide curriculum (Texas Essential Knowledge and Skills [TEKS]) in physical science.
- *Standard IX.* The science teacher knows and understands the science content appropriate to teach the statewide curriculum (Texas Essential Knowledge and Skills [TEKS]) in life science.
- *Standard X.* The science teacher knows and understands the science content appropriate to teach the statewide curriculum (Texas Essential Knowledge and Skills [TEKS]) in Earth and space science.
- *Standard XI.* The science teacher knows unifying concepts and processes that are common to all sciences.

Standard I. The science teacher manages classroom, field, and laboratory activities to ensure the safety of all students and the ethical care and treatment of organisms and specimens.

Teacher Knowledge: What Teachers Know		Application: What Teachers Can Do	
Teache	ers of Students in Grades 8–12	Teache	rs of Students in Grades 8–12
The be	ginning teacher knows and understands:	The beginning teacher is able to:	
1.1k	safety regulations and guidelines for science facilities;	1.1s	employ safe practices in designing, planning, and implementing all instructional activities (e.g., laboratory, field, demonstrations);
1.2k 1.3k	safety regulations and guidelines for science instruction; procedures for the appropriate storage, handling, use, disposal, care, and	1.2s	determine sufficient space and classroom arrangement for carrying out laboratory activities;
1.4k	maintenance of chemicals, materials, specimens, and equipment; sources of information about laboratory safety;	1.3s	provide students with continuous instruction and training in safe techniques and procedures for all laboratory and field activities, student demonstrations, and independent projects;
1.5k 1.6k	procedures for the safe handling and ethical care and treatment of organisms and specimens; procedures for responding to an accident in the laboratory, including first aid;	1.4s	read and interpret safety information about chemicals on a Materials Safety Data Sheet (MSDS) and on other chemical labels, including household products;
1.0k	legal issues associated with accidents and injuries that occur in the classroom, field, or laboratory;	1.5s	check equipment for safety (e.g., cracks in glassware, proper grounding of electrical equipment) prior to use;
1.8k	potential safety hazards in the field (e.g., insect bites, poisonous plants); and	1.6s	create, implement, and enforce rules and safety procedures to promote and maintain a safe learning environment during laboratory and field activities;
1.9k	the importance of providing laboratory space and equipment for all students, including those with special needs.	1.7s	implement regular procedures to inventory and maintain appropriate safety equipment; and
		1.8s	optimize quick and safe access to all safety equipment (e.g., eyewash station, sink, safety shower, fire blanket, and extinguisher).

Standard II. The science teacher understands the correct use of tools, materials, equipment, and technologies.

Teacher Knowledge: What Teachers Know		Application: What Teachers Can Do		
Teache	Teachers of Students in Grades 8–12		ers of Students in Grades 8–12	
The beg	The beginning teacher knows and understands:		The beginning teacher is able to:	
2.1k	procedures for the storing, securing, and routine maintenance of scientific equipment used in instructional activities;	2.1s	select and use appropriate tools, technology, materials, and equipment needed for instructional activities;	
2.2k	correct and safe operating procedures for scientific equipment used in instructional activities;	2.2s	instruct and monitor students' use of materials, tools, and instruments;	
2.3k	concepts of precision, accuracy, and error with regard to reading and recording numerical data from a scientific instrument;	2.3s	make science resources accessible to all students;	
2.58		2.4s	recycle, reuse, and conserve laboratory resources as appropriate;	
2.4k	the international system of measurement (i.e., metric system);	2.5s	use the appropriate number of significant figures to record and report numerical data;	
2.5k	the use of grade-appropriate equipment and technology for gathering, analyzing, and reporting data; and	2.6s	perform unit conversions within the international system of measurement (i.e., metric system);	
2.6k	the use of technology to acquire, assess, analyze, interpret, and communicate information.	2.7s	perform conversions within and across measurement systems;	
		2.8s	use techniques to calibrate measuring devices as appropriate;	
		2.9s	organize, display, and communicate data in a variety of ways (e.g., charts, tables, graphs, diagrams, written reports, oral presentations);	
		2.10s	gather, organize, display, and communicate data using appropriate technology (e.g., Internet, graphing calculators, spreadsheets); and	
		2.11s	evaluate the validity of data and data sources.	

Standard III. The science teacher understands the process of scientific inquiry and its role in science instruction.

Teach	er Knowledge: What Teachers Know	Application: What Teachers Can Do		
Teach	ers of Students in Grades 8–12	Teachers of Students in Grades 8–12		
The be	ginning teacher knows and understands:	The beginning teacher is able to:		
3.1k	how scientists use different types of investigation, depending on the questions they are trying to answer;	3.1s design and conduct inquiry-based scientific investigations, including nonexperimental and experimental designs;		
3.2k 3.3k	principles and procedures for designing and conducting an inquiry-based scientific investigation; the characteristics of various types of scientific investigations (e.g.,	3.2s plan and implement instruction that provides opportunities for all students to engage in scientific inquiry by using various appropriate combinations of the following processes:		
J.JK	descriptive studies, controlled experiments, comparative data analysis);	• ask a scientific question;		
3.4k	how current knowledge and theories guide scientific investigations;	 formulate a testable hypothesis; select appropriate equipment and technology for gathering information related to the hypothesis; 		
3.5k	the use of technology in scientific research; and	• make observations and collect data taking accurate and precise		
3.6k	appropriate methods of statistical analysis and measures (e.g., mean, median, mode, correlation).	 measurements; organize, analyze, and evaluate data to find data trends and patterns and make inferences; and 		
		• communicate and defend a valid conclusion about the hypothesis under investigation;		
		3.3s link inquiry investigations to students' prior knowledge and experience;		
		3.4s focus inquiry-based instruction on questions and issues that are relevant to students;		
		3.5s use strategies to assist students in identifying, refining, and focusing scientific ideas and questions guiding an inquiry activity;		
		3.6s guide students in making systematic observations and measurements;		
		3.7s use a variety of tools and techniques to access, gather, store, retrieve, organize, and analyze data;		

Standard III. The science teacher understands the process of scientific inquiry and its role in science instruction.

Application: What Teachers Can Do
Teachers of Students in Grades 8–12 (continued)
3.8s provide opportunities for students to use higher-order thinking skills, logical reasoning, and scientific problem solving to reach conclusions based on evidence;
3.9s develop, analyze, and evaluate different explanations for a given scientific result;
3.10s identify potential sources of error in a given inquiry-based investigation; and
3.11s develop criteria for assessing student participation in and understanding of the inquiry process.

Standard IV. The science teacher has theoretical and practical knowledge about teaching science and about how students learn science.

r		-	
Teacher Knowledge: What Teachers Know		Application: What Teachers Can Do	
Teachers of Students in Grades 8–12		Teache	rs of Students in Grades 8–12
Teachers of science in grades 8–12 will have a broad knowledge of all science disciplines (i.e., physical science, life science, Earth and space science) required of teachers of grades EC–8 and a deep understanding of the concepts in the science discipline(s) they teach.			
Physics	8	Physics	3
The beg	ginning teacher knows and understands:	The beg	ginning teacher is able to:
8.10k	<u>motion and forces</u> : motion occurs when a net force is applied, and gravitation, electricity, and magnetism are universal forces;	8.15s	apply all skills specified for teachers in grades EC–4, using content and contexts appropriate for grades 8–12;
8.11k	<u>conservation of energy and increase in disorder</u> : energy is kinetic or potential, and everything becomes less orderly over time; and	8.16s	create, analyze, and interpret graphs describing the motion of a particle;
8.12k	interactions of energy and matter: waves and particles can transfer energy,	8.17s	analyze examples of uniform and accelerated motion, including linear, projectile, and circular motion;
	and energy occurs in discrete quantities.	8.18s	create and analyze free-body diagrams;
		8.19s	apply Newton's laws to solve a variety of practical problems;
		8.20s	apply the law of universal gravitation to solve a variety of practical problems;
		8.21s	apply the inverse square law to calculate electrostatic forces, fields, and potentials;
		8.22s	describe the source of the magnetic force and analyze the magnetic field for various current distributions;
		8.23s	describe the relationship between electricity and magnetism;
		8.24s	design and analyze series and parallel electric circuits in terms of current, resistance, voltage, and power;

Application: What Teachers Can Do					
Teachers of Students in Grades 8–12 (continued)					
Physic	Physics (continued)				
8.25s	analyze the operation of electromagnets, motors, and generators;				
8.26s	apply the work-energy theorem to analyze and solve a variety of practical problems;				
8.27s	solve problems involving the conservation of energy in a physical system;				
8.28s	apply the first law of thermodynamics to investigate energy transformations in a variety of everyday situations;				
8.29s	describe the concept of entropy and its relationship to the second law of thermodynamics;				
8.30s	compare and contrast transverse and longitudinal waves;				
8.31s	relate concepts of amplitude, frequency, velocity, and wavelength to the properties of sound and light waves (e.g., pitch, color);				
8.32s	apply the properties of wave reflection, refraction, and interference to analyze and explain acoustical and optical phenomena;				
8.33s	describe the electromagnetic spectrum and explain how electromagnetic waves are produced;				
8.34s	interpret wave particle duality and the uncertainty principle;				
8.35s	analyze the photoelectric effect; and				
8.36s	use the quantum model of the atom to describe the line spectra from gas- discharge tubes.				

Teach	er Knowledge: What Teachers Know	Applic	ation: What Teachers Can Do
Teachers of Students in Grades 8–12 (continued)		Teachers of Students in Grades 8–12 (continued)	
Chemi	Chemistry		stry
The beginning teacher knows and understands:		The beg	ginning teacher is able to:
8.13k	structure and properties of matter: atoms and molecules interact with one another through bonding and forces;	8.37s	apply all skills specified for teachers in grades EC-4, using content and contexts appropriate for grades 8-12;
8.14k	structure of atoms: matter is made up of atoms, which are themselves made up of smaller components;	8.38s	differentiate between physical and chemical properties of matter;
8.15k	<u>conservation of matter and energy</u> : matter and energy are conserved in chemical and physical changes; and	8.39s	describe and create models to explain the molecular structure of solids, liquids, and gases;
8.16k	<u>chemical reactions</u> : chemical reactions release or consume energy.	8.40s	use the periodic table to predict and explain the physical and chemical properties of an element;
		8.41s	apply the gas laws to predict gas behavior in a variety of situations;
		8.42s	describe the properties of the bonds and the arrangement of atoms in molecules, ionic crystals, polymers, and metallic substances;
		8.43s	compare and contrast the chemical properties of ionic and covalent compounds;
		8.44s	describe the physical and chemical properties of covalent compounds in terms of intermolecular forces in the bonds;
		8.45s	predict the kind of interaction between molecules of a given substance;
		8.46s	solve problems involving moles and stoichiometry;
		8.47s	analyze factors that affect solubility;
		8.48s	determine the molarity, molality, and percent composition of aqueous solutions;

Application: What Teachers Can Do				
Teachers of Students in Grades 8–12 (continued)				
Chemistry (continued)				
8.49s	analyze and describe models to explain the structural properties of water;			
8.50s	evaluate the significance of water as a solvent in living organisms and the environment;			
8.51s	describe the atom in terms of protons, neutrons, and electron clouds;			
8.52s	analyze relationships among electron energy levels, photons, and atomic spectra;			
8.53s	relate electronic configuration to physical and chemical properties and reactivity;			
8.54s	describe the relationship between the kinetic theory and the universal gas law;			
8.55s	analyze and describe the effects of energy transformations that occur in phase changes;			
8.56s	identify and analyze the effects of energy transformations that occur in chemical reactions to enable students to make predictions about other reactions;			
8.57s	analyze and describe models to explain the process of radioactivity and radioactive decay;			
8.58s	compare fission and fusion reactions in terms of the mass of the reactants and products and the amount of energy released in the reactions;			
8.59s	use the half-life of radioactive elements to solve real-world problems;			
8.60s	evaluate the risks and benefits of the commercial uses of nuclear energy and the medical uses of radioisotopes;			

Teachers of Students in Grades 8–12 (continued)			
Chemi	Chemistry (continued)		
8.61s	evaluate environmental issues associated with the storage, containment, and disposal of nuclear wastes;		
8.62s	interpret and balance chemical and nuclear equations using number of atom mass, and charge;		
8.63s	analyze processes occurring during redox reactions using applications from everyday life;		
8.64s	determine oxidation numbers and balance redox equations in order to determine if the reaction will occur;		
8.65s	describe the operating principles of an electrochemical cell and the process electroplating metals;		
8.66s	describe the effect of solution concentration on the properties and chemical reactivity of a variety of aqueous solutions;		
8.67s	analyze and interpret relationships among ionic and covalent compounds, electrical conductivity, and colligative properties of water;		
8.68s	illustrate the relationship between the hydronium ion concentration and the pH for various acids and bases;		
8.69s	apply the principles of solution concentration and stoichiometry to analyze characteristics of a neutralization reaction;		
8.70s	analyze and apply the principles of acid-base titration;		
8.71s	analyze examples from the real world that illustrate the effects of acids and bases on an ecological system;		

Application: What Teachers Can Do <i>Teachers of Students in Grades 8–12 (continued)</i> Chemistry (continued)	
8.72s apply the law of conservation of energy to evaluate the energy exchange that occurs during a chemical reaction;	
8.73s analyze factors that affect the rate of a chemical reaction; and	
8.74s analyze and describe the chemical properties of a variety of household chemicals in order to predict potential for chemical reactivity.

Biology				
TT1 1		The beginning teacher is able to:		
The beg	inning teacher knows and understands:	9.24s	apply all skills specified for teachers in grades EC-4, using content and	
9.13k	cells: the structural and functional units of life;	9.248	contexts appropriate for grades 8–12;	
9.14k	<u>heredity</u> : the continuity and variations of traits from one generation to the next;	9.25s	compare and contrast prokaryotic cells, eukaryotic cells, and viruses;	
9.15k	evolution of life: the historical changes in life forms;	9.26s	explain how cells carry out the life processes, including homeostasis, energy production, transportation of molecules, disposal of wastes, synthesis of new molecules and cell parts, and cellular reproduction;	
9.16k	diversity of life: similarities and differences among organisms;	0.07		
9.17k	flow of matter and energy: organisms are linked to one another and to their	9.27s	analyze cell differentiation in the development of organisms;	
9.17K	physical setting by the transfer and transformation of matter and energy; and	9.28s	analyze how an organism grows and how specialized cells, tissues, and organs develop;	
9.18k	interdependence of life: species depend on one another and the environment			
	for survival.	9.29s	compare and contrast cells in different parts of plants and animals;	
		9.30s	describe the role of microorganisms and viruses in maintaining health (e.g., digestion) and in causing disease;	
		9.31s	describe the structure and replication of DNA;	
		9.32s	explain the model of protein synthesis;	
		9.33s	compare growth, sexual and asexual reproduction, and the underlying processes of mitosis and meiosis;	

Application: What Teachers Can Do				
Teach	Teachers of Students in Grades 8–12 (continued)			
Biolog	y (continued)			
9.34s	describe the biological significance and causes (e.g., mutation, genetic engineering) of genetic variation in populations;			
9.35s	analyze human karyotypes in order to identify gender and genetic disorders;			
9.36s	analyze how fossils, DNA sequences, anatomical similarities, physiological similarities, and embryology provide evidence of change in populations and species;			
9.37s	analyze the results of natural selection in species variation, diversity, speciation, phylogeny, adaptation, behavior, and extinction;			
9.38s	predict how an environmental change will prompt adaptations of an organism;			
9.39s	compare various scientific explanations of species diversity (e.g., natural selection, human influence, global catastrophes);			
9.40s	explain the uses and limitations of classification schemes;			
9.41s	analyze relationships among organisms to develop a model of a hierarchical classification system;			
9.42s	classify organisms at several taxonomic levels using dichotomous keys, including the use of natural materials;			
9.43s	compare the characteristics of kingdoms, including monerans, protists, fungi, plants, and animals;			
9.44s	describe how adaptations allow an organism to exist within an aquatic environment;			

Application: What Teachers Can Do				
Teachers of Students in Grades 8–12 (continued)				
Biology (continued)				
9.45s	analyze how systems and subsystems maintain homeostasis;			
9.46s	compare the structures and functions of different types of biomolecules, such as carbohydrates, lipids, proteins, and nucleic acids;			
9.47s	identify and analyze the effects of enzymes in synthesis and degradation of biomolecules (e.g., DNA, food);			
9.48s	compare and contrast the processes of photosynthesis and cellular respiration			
9.49s	analyze the functions of systems in plants (e.g., transport, reproduction);			
9.50s	analyze the functions of systems in animals;			
9.51s	describe the relationships between internal feedback mechanisms in the maintenance of homeostasis;			
9.52s	explain how organisms, including humans, respond to external stimuli;			
9.53s	analyze the importance of nutrition, environmental conditions, and physical exercise on health;			
9.54s	analyze the flow of energy and cycling of matter through the carbon, oxygen, nitrogen, and water cycles;			
9.55s	analyze the flow of energy and cycling of matter through different trophic levels and between organisms, including humans, and the physical environment;			
9.56s	explain the relationship between the abiotic characteristics of the different biomes and the variations, tolerances, and adaptations of populations or species of plants and animals in those biomes;			

	Application: What Teachers Can Do <i>Teachers of Students in Grades 8–12 (continued)</i> Biology (continued)		
	9.57s	identify the indigenous plants and animals in an ecosystem and assess their function;	
	9.58s	compare and contrast the characteristics of freshwater, brackish, and saltwater ecosystems;	
	9.59s	analyze interactions in an ecosystem (e.g., food chains, food webs, food pyramids), including human interactions;	
	9.60s	interpret interactions among organisms and viruses exhibiting predation, parasitism, commensalism, and mutualism;	
	9.61s	predict how the introduction, removal, or reintroduction of an organism may alter the food chain and affect existing populations in an ecosystem;	
	9.62s	analyze the interdependence among organisms in an aquatic environment and the biosphere;	
	9.63s	relate carrying capacity to population dynamics;	
	9.64s	calculate the exponential growth of populations given various assumptions;	
	9.65s	analyze how geographic locales, natural events, diseases, and birth and death rates affect population predictions; and	
	9.66s	analyze and evaluate the economic significance and interdependence of components of an environmental system.

Teachers of science in grades 8–12 will have a broad knowledge of all science disciplines (i.e., physical science, life science, Earth and space science) required of teachers of grades EC–8 and a deep understanding of the concepts in the science discipline(s) they teach.					
Earth a	and Space Science	Earth and Space Science			
The beg	ginning teacher knows and understands:	The beg	inning teacher is able to:		
10.11k	structure and function of Earth systems: the Earth is comprised of a set of	10.14s	apply all skills specified for teachers in grades EC–4, using content and contexts appropriate for grades 8–12;		
	closely coupled subsystems—the geosphere, hydrosphere, atmosphere, and biosphere; 10.15	10.15s	analyze the processes that power the movement of Earth's continental and oceanic plates;		
10.12k	Earth's history: the Earth system exists in a state of dynamic equilibrium that evolves over geologic time;	10.16s	identify and analyze the effects of plate movement, including faulting, folding, earthquakes, and volcanic activity;		
10.13k	components and properties of the solar system: the major components of the solar system are in a state of regular, predictable motion; and	10.17s	compare and contrast chemical and mechanical weathering;		
10.14k	<u>composition</u> , <u>history</u> , <u>and properties of the universe and its scale in space and</u> <u>time</u> : current theories of the origin and evolution of the universe are based on the assumption that the fundamental laws of nature do not change over space	10.18s	analyze a given landform to understand its history (e.g., weathering, tectonism);		
	and time.	10.19s	analyze the role of weathering in the formation of soils;		
		10.20s	describe procedures for determining the physical properties used for mineral identification (e.g., density, hardness, streak, cleavage);		
		10.21s	use physical properties and a key to identify common minerals and describe their properties and economic significance;		
		10.22s	classify rocks according to how they are formed during the rock cycle;		

Applica	ation: What Teachers Can Do		
Teache	Teachers of Students in Grades 8–12 (continued)		
Earth and Space Science (continued)			
10.23s	analyze factors (e.g., temperature, pressure, rate of cooling) that influence the formation of rock types;		
10.24s	identify the composition and analyze the structure of the atmosphere;		
10.25s	analyze the range of atmospheric conditions in which organisms can live;		
10.26s	analyze the effect of natural events and human activities on the atmosphere;		
10.27s	analyze the role of the Sun as the major source of energy for phenomena on the Earth's surface (e.g., weather, water cycle);		
10.28s	describe and analyze effects of the transfer of energy at the boundaries between the atmosphere and land and ocean masses;		
10.29s	identify, describe, and compare global climatic zones;		
10.30s	describe the effects of phenomena such as El Niño and the jet stream on local weather;		
10.31s	analyze the causes and effects of severe weather systems;		
10.32s	identify and evaluate water sources, uses, quality, and conservation methods within a local environmental system;		
10.33s	describe the tools and procedures needed to collect and analyze baseline quantitative data, such as pH, salinity, temperature, mineral content, nitrogen compounds, and turbidity, from an aquatic environment;		
10.34s	analyze carbon, nitrogen, water, and nutrient cycles within an aquatic ecosystem;		

	Application: What Teachers Can Do		
	Teachers of Students in Grades 8–12 (continued) Earth and Space Science (continued)		
	10.35s	evaluate and predict effects of chemical, physical, and thermal changes on the biotic and abiotic components of an aquatic ecosystem;	
	10.36s	describe and analyze both local and global issues affecting an aquatic system;	
	10.37s	identify and analyze the characteristics of a local watershed;	
	10.38s	describe and explain procedures for estimating water quantity and analyzing water quality in a local watershed;	
	10.39s	explain the effect of floods, droughts, irrigation, and industrialization on a watershed;	
	10.40s	apply the principles of fluid statics and dynamics (e.g., Archimedes' and Bernoulli's principles, hydrostatic pressure) to analyze aquatic systems;	
	10.41s	describe and analyze the dynamics of fluids in an upwelling;	
	10.42s	identify and determine characteristics of ocean water (e.g., salinity, turbidity, heat capacity, colligative properties, and density);	
	10.43s	explain the interrelationships among plate tectonic activity, ocean currents, climates, and biomes;	
	10.44s	compare and contrast the topography of the ocean floor with the topography of the continents;	
	10.45s	evaluate the causes and effects of tides, tidal bores, and tsunamis;	
	10.46s	analyze and evaluate issues, including economic issues, regarding the use of fossil fuels and other renewable, nonrenewable, and alternative energy sources;	

Application: What Teachers Can Do		
Teachers of Students in Grades 8–12 (continued)		
Earth and Space Science (continued)		
10.47s	describe and analyze the effects that events such as hurricanes, fires, deforestation, mining, population growth, and municipal development may have on environments;	
10.48s	explain how regional changes in the environment may have a global effect;	
10.49s	evaluate the effect of human activity and technology on land fertility and aquatic viability;	
10.50s	identify and evaluate methods of land use and management;	
10.51s	describe and analyze examples of a community restoring an ecosystem;	
10.52s	describe and examine a habitat restoration or protection program;	
10.53s	analyze the relationship between current geologic theories for the origin of Earth and the geologic time scale;	
10.54s	describe and analyze the historical development of the theory of plate tectonics, including continental drift and sea-floor spreading;	
10.55s	describe the origin of fossil fuels;	
10.56s	describe the historical development of scientific theories of Earth and solar system formation;	
10.57s	analyze the effect of the space program on the collection of data about Earth, the solar system, and the universe;	
10.58s	identify the approximate mass, size, motion, temperature, structure, and composition of the Sun;	

Application: What Teachers Can Do		
Teachers of Students in Grades 8–12 (continued)		
Earth and Space Science (continued)		
10.59s	compare and contrast the planets in terms of size, orbit, composition, rotation, atmosphere, moons, and geologic activity;	
10.60s	apply the law of universal gravitation to analyze planetary motion;	
10.61s	describe procedures for observing the nighttime sky to determine movement of the planets relative to the stars;	
10.62s	describe the properties of objects other than planets that orbit the Sun;	
10.63s	describe and analyze the Sun's effect on Earth;	
10.64s	analyze information about lunar phases and use that information to model the Earth, moon, and Sun system;	
10.65s	compare and contrast factors essential to life on Earth (e.g., temperature, water, mass, gases) to conditions on other planets;	
10.66s	analyze the relationship between Earth's placement in the solar system and the conditions on Earth that enable organisms to survive;	
10.67s	analyze the effects of the moon on tides;	
10.68s	analyze the effects of Earth's rotation, revolution, and tilt of axis on its environment;	
10.69s	describe the historical origins of the constellations and their role in ancient and modern navigation;	
10.70s	apply astronomical units of measurement;	
10.71s	describe the historical development of the big bang theory;	
1		

Application: What Teachers Can Do	
Teachers of Students in Grades 8–12 (continued)	
Earth and Space Science (continued)	
10.72s research and analyze empirical data on the estimated age of the universe;	
10.73s describe and analyze characteristics of galaxies;	
10.74s analyze and interpret data to make inferences about the formation of galaxies and our solar system;	
10.75s describe and analyze the nuclear reactions that occur in stars;	
10.76s describe how characteristics of stars, such as temperature, age, relative size, composition, and radial velocity, can be determined using spectral analysis;	
10.77s identify the stages in the life cycle of stars using the Hertzsprung-Russell diagram; and	
10.78s explain the postulates and implications of the special theory of relativity.	

Standard XI. The science teacher knows unifying concepts and processes that are common to all sciences.

Teacher Knowledge: What Teachers Know Teachers of Students in Grades 8–12		Application: What Teachers Can Do Teachers of Students in Grades 8–12		
The beginning teacher knows and understands:		The beginning teacher is able to:		
11.1k	how systems and subsystems can be used as a conceptual framework to organize and unify the common themes of science and technology;	11.1s	apply the systems model to identify and analyze common themes that occur in physical science, life science, and Earth and space science;	
11.2k	how patterns in observations and data which explain natural phenomena allow predictions to be made;	11.2s	analyze a system (e.g., a cell, the ocean, an ideal gas) in terms of cycles, structure, and processes;	
11.3k	how the concepts and processes listed below provide a unifying framework across the science disciplines:	11.3s	analyze the general features of systems (e.g., input, process, output, feedback);	
	systems, order, and organization;evidence, models, and explanation;	11.4s	analyze the interactions that occur between the components of a given system or subsystem;	
	 change, constancy, and measurements; evolution and equilibrium; and form and function; 	11.5s	analyze the interactions and interrelationships between various systems and subsystems; and	
11.4k	properties and patterns of systems can be described in terms of space, time, energy, and matter;	11.6s	use the systems model to analyze the concepts of constancy (e.g., conservation of mass, energy, and momentum) and change (e.g., evolution).	
11.5k	how change and constancy occur in systems;			
11.6k	the complementary nature of form and function in a given system; and			
11.7k	how models are used to represent the natural world and how to evaluate the strengths and limitations of a variety of scientific models (e.g., physical, conceptual, mathematical).
