#### Abstract

This report reviews Advanced Placement (AP) and International Baccalaureate (IB) examination participation and performance in Texas during the 2009-10 school year. Campus-, district-, and state-level examination results for students in Texas public schools are presented, as well as state-level examination results for students in Texas public and nonpublic schools combined. The report discusses the use of AP and IB examination results in college admissions and the Academic Excellence Indicator System. It also provides descriptions and brief histories of the AP and IB programs, along with a brief history of state policy and funding related to the AP and IB programs in Texas.

Keywords. Advanced placement, international baccalaureate, credit by examination, testing, incentive, high school, financial need, scores, gifted and talented.

Additional copies of this document may be purchased using the order form in the back of this publication. Also, the report is available in PDF format on the agency website at http://www.tea.state.tx.us/acctres/ap_ib_index.html. Additional information about this report may be obtained by contacting the Texas Education Agency Division of Accountability Research by phone at (512) 475-3523 or by e-mail at research@tea.state.tx.us.

# Highlights 

## Results for Texas Public Schools

## Results for Public and Nonpublic Schools Combined in Texas, Other States, and the United States

## Results for Texas Public Schools

## Advanced Placement

## Statewide Results

- In the 2009-10 school year, 119,743 Texas public school students in 11th and 12th grade took 251,614 Advanced Placement (AP) examinations. Between 2008-09 and 2009-10, the percentage of 11th and 12th graders taking AP examinations rose from 21.0 percent to 22.5 percent.
- Depending on individual college and university admissions policies, students may receive college credit or advanced placement for scores in the 3-5 range on AP examinations. The percentage of 11th- and 12th-grade AP examinees scoring in the 3-5 range on at least one examination was 50.1 percent in 2009-10, a decrease of 0.6 percentage points from 50.7 percent in 2008-09.
- In the 2009-10 school year, 93.7 percent of AP examinees in Grades 9 through 12 completed advanced academic courses. This was virtually unchanged from 93.8 percent in 2008-09.
- In 2009-10, a total of 672 (61.8\%) of the 1,087 Texas public school districts and charter schools with enrollment in Grade 11 and/or Grade 12 had students who took at least one AP examination.

## Participation and Performance by Race/Ethnicity

- In the 2009-10 school year, 19.4 percent of Hispanic students in Grades 11 and 12 participated in at least one AP examination. Among non-Hispanic students, 52.5 percent of Asians, 26.7 percent of multiracial students, 25.6 percent of Whites, 22.5 percent of Pacific Islanders, 19.2 percent of American Indians, and 14.3 percent of African Americans participated in at least one AP examination in 2009-10.
- In 2009-10, Hispanic students made up 43.5 percent of public school enrollees in Grades 11 and 12 and 37.6 percent of AP examinees. Among non-Hispanics, African American students represented 12.9 percent of enrollees and 8.2 percent of AP examinees. In contrast, White students made up 37.7 percent of enrollees and 43.0 percent of AP examinees.
- In 2009-10, the percentages of Texas public school AP examinees in 11th and 12th grade scoring in the 3-5 range on at least one AP examination decreased from the previous year for Hispanic examinees, stayed the same for non-Hispanic African American examinees, and increased for non-Hispanic White examinees.

## Participation and Performance by Gender

- Between 2008-09 and 2009-10, the participation rate for 11th- and 12th-grade female students taking AP examinations increased from 23.1 percent to 24.8 percent; participation for males increased from 18.7 percent to 20.1 percent.
- The percentage of 11 th- and 12 th-grade female examinees scoring in the 3-5 range on AP examinations was 48.7 percent in 2009-10. The percentage of male examinees scoring in the 3-5 range was 52.0 percent.

## International Baccalaureate

## Statewide Results

- A total of 2,805 Texas public school students in Grades 11 and 12 took 8,196 International Baccalaureate (IB) examinations in 2009-10. This was an increase from the 2008-09 school year, during which 2,364 Texas public school students took 7,244 examinations.
- Colleges that recognize IB scores usually award credit or advanced placement to students who score in the 4-7 range on IB examinations. In the 2009-10 school year, 87.9 percent of IB examinees scored in the 4-7 range, an increase of 0.8 percentage points from 87.1 percent in 2008-09.
- In 2009-10, a total of 34 (3.1\%) of the 1,087 Texas public school districts and charter schools with enrollment in Grade $11 \mathrm{and} /$ or Grade 12 had students who took at least one IB examination.

## Participation and Performance by Race/Ethnicity

- IB examination participation rates ranged from 0.2 percent to 4.2 percent across racial/ethnic groups in 2009-10.
- In 2009-10, most IB examinees in Texas public schools (87.9\%) scored in the 4-7 range on IB examinations. Among non-Hispanic examinees, 92.4 percent of Asian, 89.3 percent of White, and 72.2 percent of African American examinees scored in the 4-7 range. Hispanic IB examinees scored in the $4-7$ range at a rate of 86.9 percent.

## Participation and Performance by Gender

- A higher percentage of female (89.1\%) than male (86.4\%) IB examinees achieved scores in the 4-7 range in 2009-10.

## Results for Public and Nonpublic Schools Combined in Texas, Other States, and the United States

- In 2009-10, a total of 179,320 students in Texas public and nonpublic schools took 325,571 AP examinations. Compared to the 50 states and the District of Columbia, Texas was 5th in the percentage increase in number of examinees from the previous year (12.8\%).
- In 2009-10, the three AP examinations with the largest numbers of test takers were the same in Texas and the United States: English Language and Composition, United States History, and English Literature and Composition.
- Compared to the United States, Texas had higher percentages of examinees with scores in the 3-5 range on 3 out of 34 examinations: European History, Chinese Language and Culture, and Japanese Language and Culture.

## Introduction

## Program Descriptions

The Advanced Placement (AP) Program and the International Baccalaureate (IB) Diploma Programme are advanced academic programs that make rigorous, college-level academic content available to secondary school students. The Advanced Placement Program is a cooperative educational partnership between secondary schools and colleges and universities, overseen by the College Board. The International Baccalaureate Diploma Programme is an academic program offered in secondary schools throughout the world and is overseen by International Baccalaureate (IB), a nonprofit educational foundation.

The Advanced Placement Program offers students the opportunity to take one or more advanced level courses and examinations from six academic areas: arts, English, history and social sciences, mathematics and computer science, sciences, and world languages (College Board, 2010e). Although most students participate in AP courses before taking the corresponding examinations, they may take AP examinations without having taken the courses.

The International Baccalaureate Diploma Programme is a high school curriculum for students ages 16-19 that is anchored by three core components: a Theory of Knowledge (TOK) course; Creativity, Action, and Service (CAS) activities; and an extended essay project based on original, independent research. Six academic subject groups build on the core components: Language A1 (first language), Second Language, Individuals and Societies, Experimental Sciences, Mathematics and Computer Science, and The Arts. Although student participation in the IB courses and examinations is designed to culminate in attainment of an IB Diploma, students who do not satisfy all requirements or who choose to take fewer than six subject examinations are awarded certificates for examinations completed with acceptable scores (IB, 2007).

## Outcomes for Students

Participation in AP and IB programs benefits students, teachers, high schools, and the colleges and universities attended by program participants. Students who participate in AP or IB courses are given the opportunity to complete college-level coursework while still in high school. Those who perform well on AP or IB examinations may qualify for college credit and gain advanced placement in college courses when they enroll in institutions of higher education. Students who perform well on AP examinations are eligible and automatically considered for several types of AP Scholar Awards.

Colleges and universities around the world recognize student participation and performance in AP and IB courses and examinations (College Board, 2010e). Students participating in the AP Program can earn the Advanced Placement International Diploma (APID) for overseas study (College Board 2010a). In order for students attending schools in the United States to obtain an APID they must indicate on at least one AP examination answer sheet that scores should be sent to a designated university outside the United States. The APID is not a substitute for a high school
diploma; rather, it is an acknowledgment to universities in other countries that recipients are ready for the challenge of post-secondary work. Outside the United States, universities in more than 60 countries recognize AP examination scores in the admissions process and/or for credit and advanced placement (College Board, 2010e). To receive an APID, students must earn scores of 3 or higher on at least five AP examinations in the following content areas:

- two different languages selected from among English and the other world languages;
- one from a discipline designated as offering a global perspective, such as World History, Government and Politics: Comparative, and Human Geography;
- one from a science or mathematics content area; and
- one from any content area except English and other world languages (College Board, 2010a).

To satisfy one of the two AP language requirements, students may submit letters from administrators at their schools verifying mastery of a language that is not currently available in the AP Program. Students who take this option must submit the results of an additional AP examination from another content area. Regardless of how students satisfy the two-examination language requirement, they must submit a total of five AP examination scores of 3 or higher to qualify for the APID.

Students who successfully complete the IB Diploma Programme and meet IB score criteria on examinations are awarded IB Diplomas in addition to traditional high school diplomas (IB, 2007). To receive an IB Diploma, candidates must accumulate at least 24 of 45 total examination points in the required subject areas, plus complete the TOK course, CAS activities, and the extended essay at satisfactory levels. The maximum score of 45 points includes scores of 7 on each of the six subject examinations and three bonus points for an exceptional essay and exceptional performance in the TOK course. Many institutions of higher education outside the United States accept the IB Diploma for partial fulfillment of admissions requirements.

## Benefits for Teachers and Schools

Secondary school teachers who teach AP or IB courses benefit from opportunities for professional development and the chance to teach challenging subjects to high-performing, motivated students. High schools benefit by expanding the academic choices for students who wish to take rigorous courses and by enhancing the quality and reputation of their college preparatory programs. Colleges and universities have a means of identifying and recruiting students who successfully meet the demands of challenging, college-level courses while still in high school.

## Advanced Placement Scholar Awards

Each year, the College Board offers Advanced Placement (AP) Scholar awards to recognize students who demonstrate an ability to perform college-level work by obtaining high scores on AP examinations (College Board, 2010g). There are nine different types of AP Scholar awards, each defined by varying participation and performance criteria on AP examinations taken in the current and all previous years. Although no monetary awards are provided to AP Scholars, the designation is acknowledged on AP grade reports that are delivered to colleges and universities. In the 2009-10 school year, a total of 27,810 AP Scholar Awards were awarded to Texas public and nonpublic school students (College Board, 2011d). The types of AP Scholar awards are shown below.
\(\left.\begin{array}{lll}\hline Type of Award \& Recipient \& AP Participation/Performance Requirements <br>

\hline AP Scholar \& Any AP participant in the United States. \& Scores of 3 or higher on three or more examinations.\end{array}\right\}\)| AP Scholar with Honor | Any AP participant in the United States. | Average score of 3.25 on all examinations and <br> scores of at least 3 on four or more examinations. |
| :--- | :--- | :--- |
| AP Scholar with Distinction | Any AP participant in the United States. | Average score of at least 3.5 on all examinations and <br> scores of 3 or higher on at least five examinations. |
| State AP Scholar | One male and one female AP participant <br> in each U.S. state and the District of <br> Columbia. | Scores of 3 or higher on the greatest number of <br> examinations and a minimum of 3.5 average score <br> on all examinations. |
| National AP Scholar | Any AP participant in the United States. | Average score of at least 4 on all examinations taken <br> and scores of 4 or higher on eight or more of these <br> examinations. |
| National AP Scholar (Canada) | Any AP participant in Canada. | Average score of 4 or higher on all examinations <br> taken and scores of 4 on at least five or more of <br> these examinations. |
| National AP Scholar (Bermuda) | Any AP participant in Bermuda. | Average score of at least 4 on all examinations taken <br> and scores of 4 on five or more of these <br> examinations. |
| DoDEA AP Scholar | One male and one female AP participant <br> attending Department of Defense <br> Education Activity (DoDEA) schools. | Highest average score on the greatest number of <br> examinations, with a minimum score of 3 on three <br> examinations. |
| International AP Scholar | One male and one female AP participant <br> attending a school outside the United <br> States and Canada that is not a DoDEA <br> school. | Highest average score on the greatest number of <br> examinations, with a minimum score of 3 on three <br> examinations. |

## History

## Advanced Placement Program

The AP Program was developed over a six-year period, beginning in 1951. Initially named the Kenyon Plan, the program originated with a committee of representatives from 12 colleges and was organized by Kenyon College President Gordon Keith Chalmers. The committee, known as the School and College Study of Admissions and Advanced Standing Committee, was established to develop descriptions of advanced level courses through which high school students could obtain
college credit. Funding for the work was provided through the Ford Foundation Fund for the Advancement of Education. Later expanded to include 12 secondary schools, the committee was renamed the Central Committee of the School and College Study (CCSCS).

Also in 1951, a study supported through the Fund for the Advancement of Education examined what students were being taught in the final two years of high school and the first two years of college. The study was conducted by a committee of representatives from three private high schools and three universities and resulted in the report, General Education in School and College (Blackmer et al., 1952). The report concluded that secondary and post-secondary schools were failing to view their roles in education as parts of a single, continuous process. Following adoption of the recommendations contained in the General Education in School and College report, CCSCS developed 11 advanced course and examination descriptions for secondary schools that would satisfy the credit-granting standards of the 12 member colleges. In 1952, CCSCS implemented a program to pilot the 11 courses in seven high schools. Academically advanced students in each high school were offered the opportunity to take the courses in their senior years.

During the 1953-54 school year, the Educational Testing Service (ETS) assisted CCSCS in the development and administration of examinations for each of the 11 advanced courses. The examinations were first administered in May 1954 to seniors in the pilot high schools and to freshmen at the 12 member colleges. To evaluate the ability of the examinations to measure college-level achievement, results for the high school students were compared to those for the college freshmen. In 1956, CCSCS invited the College Board to administer what was still referred to as the Kenyon Plan on a national level. Under College Board leadership, the Kenyon Plan became what is now the Advanced Placement Program.

Since that time, the AP Program has continued to grow and gain recognition. Articles promoting the benefits of the program began appearing in academic and education journals, and increasing numbers of colleges and universities began awarding credit for AP examination grades of 3 or higher. Teacher training summer institutes were started, and teachers began reporting that the program was revitalizing their careers. An increasing number of schools participated in the program each year, and as more and more students participated in the program, schools added courses and examinations. Moreover, as academic course offerings grew and changed, the AP Program introduced new courses and examinations.

By 1960, five times as many examinations were taken as in the first year the College Board supervised the program. In 2010, that number grew to more than 3.2 million (College Board, 2011f). During the 2009-10 school year, the AP Program offered 33 examinations to approximately 1.8 million students in 17,861 schools (College Board, 2010f, 2010h).

## International Baccalaureate Diploma Programme

An interest in creating a high school program and college entrance examination that would be acceptable to colleges and universities around the world emerged through discussions over a number

## International Baccalaureate Primary and Middle Years Programmes

This report focuses on the International Baccalaureate (IB) Diploma Programme, which is offered in high school to students typically between the ages of 16 and 19. IB programs are available to younger students as well. The Middle Years Programme (MYP), introduced in 1994, is offered to students ages 11 to 16, and the Primary Years Programme (PYP), introduced in 1997, is offered to students ages 3 to 12 .

The IB describes the MYP as a program that "provides a framework of academic challenge that encourages students to embrace and understand the connections between traditional subjects and the real world, and become critical and reflective thinkers" (IB, 2010e). Students are required to study eight subject groups: their primary language, a second language, humanities, sciences, mathematics, arts, physical education, and technology. Students complete a personal project in the final year of the program, which allows them to demonstrate the knowledge and skills they have developed throughout the program.

The PYP focuses on the development of the "whole child as an inquirer, both in the classroom and in the world outside" (IB, 2010f). The program has six transdisciplinary themes and offers a "balance between learning about or through the subject areas, and learning beyond them." The six transdisciplinary themes are: who we are; where we are in place and time; how we express ourselves; how the world works; how we organize ourselves; and sharing the planet.

Any school wishing to offer an IB program and become an IB World School must first go through an authorization process. The requirements for authorization are the same for all schools, but the process may be administered differently within each IB region. The process is designed to ensure schools are well prepared to implement the program successfully. Once schools are authorized, they are subject to an ongoing process of review and development, using standards and practices that apply to all IB World Schools (IB, 2010b).

In the United States, there are 1,239 IB World Schools offering one or more of the three IB programs (IB, 2010c). PYP is offered in 261 schools; 428 schools offer the MYP; and 718 schools offer the Diploma Programme. In Texas, there were 103 IB World Schools offering one or more of the three IB programs in 2010. The PYP is offered in 33 schools; 36 schools offer the MYP; and 48 schools offer the Diploma Programme.
of years among faculty in primarily European institutions of higher education. The idea was first presented by the International School of Geneva (Ecolint) in 1925 and reemerged in 1948 at the Conference of Internationally Minded Schools. Finally, in 1961, faculty and administrators at Ecolint organized a conference aimed at exploring social studies curricula in international schools. The conference took place with the assistance of the International Schools Association (ISA) and with funding from the United Nations Educational, Scientific and Cultural Organization (UNESCO). After the conference, ISA obtained further funding from UNESCO and called for the establishment of a separate organization dedicated to the development of an international high school program and college entrance examination. The International Schools Examination Syndicate (ISES) was created in 1965.

Initially, membership in ISES included individuals from ISA, Ecolint, the European Office of the Carnegie Endowment for World Peace, and Oxford University. Using grants from UNESCO and the

Twentieth Century Fund, ISES studied several elements of an international curriculum and associated set of examinations. Forming an internationally agreed upon curriculum required a compromise among different curriculum traditions/standards in the various countries. At one extreme was a standard that required students to devote the first half of their secondary education to "general studies" and then allowed them to devote the remaining two years to a narrower, specialized course of study. At the opposite extreme was a standard requiring students to devote all four years of their secondary education to the same wide range of general studies.

The first draft of a common, international curriculum was presented at a conference in Geneva in March 1965. To accommodate the variety of standards from different countries, it was proposed that the curriculum include no individual subject specifications for students enrolled in the two-year program. Instead, the curriculum would consist of several general subject areas, from which students would choose at least one specific course each. In 1966, after a second curriculum conference, the completion of several studies, and an expansion of ISES to include individuals from the United Nations International School in New York and the College Board, ISES received a grant from the Ford Foundation. Subsequently, ISES was renamed the International Baccalaureate Organization (IBO).

The newly established IBO set out to meet five objectives: (a) to establish a unified international curriculum and examination system; (b) to obtain the agreement of a significant number of universities in different countries to accept results of the IBO examinations for admission; (c) to obtain the agreement of several schools to teach the new curriculum; (d) to obtain acceptance of the program by parents whose children would be educated using the new curriculum; and (e) to obtain sufficient funding to maintain the program. In large part, all of these objectives were achieved within a year, and the entire proposed structure, along with several completed syllabi, were presented at a final conference in 1967. In 1970, the first 29 students completed the program and used their examination results for college entrance.

During the 1970s and 1980s, the IBO expanded worldwide. In 1977, the IBO North American office was opened in New York. The IBO's Africa, Europe, Middle East regional office first opened in London in 1978 and has since moved to Geneva. In 1982, the IBO Latin American office was opened in Buenos Aires. That same year, the IBO Asia-Pacific office was opened in Singapore. Regional offices promote IB programs to universities and governments within each region. Today, the IB Diploma Programme is accepted by universities around the world. Overall, IB works with 3,142 schools in 140 countries to offer IB programs to approximately 902,000 students (IB, 2010a).

In 2007, the official name of the organization changed from International Baccalaureate Organization (IBO) to International Baccalaureate (IB), and IB endorsed a new logo to be used as the sole logo for IB. The IB website (http://www.ibo.org/) explains that the change was intended to make the name more inclusive; the emphasis on the "Organization" of IBO was ignoring the wider IB community. The new name and the use of one logo is intended to "help potential parents, teachers, administrators and others to more quickly recognize that a school is part of the IB worldwide community and committed to quality education, pedagogical leadership and internationalmindedness" (IB, 2010g).

## Courses

## Advanced Placement Program

As of the 2009-10 school year, the College Board's AP Program offered 33 courses: 5 in the arts, 2 in English, 9 in history and social sciences, 4 in mathematics and computer science, 6 in the sciences, and 7 in world languages (College Board, 2010e). Computer Science AB, French Literature, Italian Language and Culture, and Latin Literature were dropped after the 2008-09 school year. Table A-1 in Appendix A lists each Texas public school AP course and corresponding AP examinations, along with the minimum college credit hours recommended by the American Council on Education (American Council on Education, 2008). Although a large proportion of participation in AP courses and examinations is accounted for by students in Grades 11 and 12 as they approach the transition to college, students in Grades 8 through 10 may also take courses and examinations. Participation in Grade 8 is driven largely by programs such as the Texas Middle School Program for AP Spanish which focus on increasing access to the AP program and providing early exposure to college-level work.

AP courses are developed at individual campuses by high school educators, based on course descriptions provided by the College Board. Although high school AP teachers have discretion to present the material in the way they deem most appropriate, course descriptions include specific information about what students are expected to know in the corresponding college courses. Each course description was developed by an AP Development Committee consisting of college and university academic faculty and experienced AP high school teachers. The committee members represent a wide range of institutions throughout the country and possess a diversity of knowledge and perspectives in their respective fields (College Board, 2004).

In 2007, the College Board began requiring high schools to submit AP Course Audit materials to request authorization to assign the "AP" designation to advanced classes. AP Course Audit materials include a subject-specific audit form and a course syllabus from each teacher who teaches an AP course. For courses to receive the AP designation from the College Board, course curricula must meet or exceed expectations established by college and secondary school faculty for corresponding college-level courses. After receiving initial authorization from the College Board to offer a specific AP-designated course, schools will not need to re-submit Course Audit materials in subsequent years unless the teacher of the course changes, requirements for the course are revised, or a new AP course is added.

The AP Course Audit was created to provide to teachers and administrators clear guidelines on curricular and resource requirements for AP courses and to help colleges and universities better interpret courses designated as AP on student transcripts (College Board, 2010b). Schools that do not offer AP courses are not affected by the AP Course Audit requirement; the College Board allows any school to administer AP examinations, regardless of the courses offered to students.

## International Baccalaureate Diploma Programme

The IB Diploma Programme offers courses across the six academic areas: First Language, Second Language, Individuals and Societies, Experimental Sciences, Mathematics and Computer Sciences, and The Arts (IB, 2007). First Language courses introduce students to literature from around the world in their native language, allowing them to develop their oral and written communication skills and to learn techniques of literary criticism. Second Language courses promote an understanding of another culture through the study of a second language. Individuals and Societies courses include nine subjects: economics, geography, history, philosophy, psychology, social and cultural anthropology, business and management, Islamic history, and information technology in a global society. Experimental Sciences courses include biology, chemistry, design technology, and physics. Mathematics courses allow students to either study the topic in depth or enhance their understanding of other subjects. Computer Science courses teach students about the range and organization of computer systems as well as the use of computers in a wide range of disciplines, applications, and contexts. Courses in The Arts area include film, music, theater, and visual arts-allowing students to learn to express themselves artistically and to explore art forms from different cultures.

Diploma candidates are required to select one course from each academic area. The single exception is in The Arts area, where students may substitute a second course from one of the other five areas. The six subject-area courses are taken at either the Standard Level, which consists of 150 teaching hours, or the Higher Level, which consists of 240 teaching hours. Students must take at least three, but not more than four, subject-area courses at the Higher Level. This allows them sufficient freedom to investigate their favorite subjects in greater depth and still ensures they complete a broad curriculum during the two-year period. Typically, course materials are reviewed every seven years, although curricula may be revised more often if significant changes occur within a discipline.

## Examinations

## Advanced Placement Program

Each AP examination includes a free-response section, either essay or problem solving, and a section of multiple-choice questions (College Board, 2011a). The only exception to this format is AP Studio Art, which is a portfolio assessment. In addition to the free response and multiple choice sections, the language examinations include a speaking component, and the AP Music Theory examination includes a sight-singing task. Examinations vary in length, and scores range from 1 to 5 (Table 1 on page 10). AP examinations are administered each year in May.

Annual AP examinations are developed by the same committees that produce AP course specifications. The committees meet throughout the year to discuss and develop new examination items (College Board, 2004). Multiple-choice items are created by college faculty members serving

Table 1
Description of Scores in Advanced Placement (AP) and International Baccalaureate (IB) Examination Grading Scales

Source. College Board (2010d) and International Baccalaureate (2010d).
on the development committees, and free-response questions are created by the full committees. To help ensure the reliability of the free-response and essay sections, scorers of these sections receive extensive training and monitoring.

The process of examination development can be broken down into three stages. The first stage consists of writing test items and ensuring the content validity of the items. During this stage, Educational Testing Service (ETS) collaborates closely with AP development committees, which are composed of college and university faculty and experienced AP teachers. The committees may develop model test items, and they carefully review any item developed to ensure content validity and accuracy. The second stage consists of pretesting items and ensuring they meet proper psychometric standards, then developing final AP test forms. In this stage, sets of AP test items are assembled into pretests that reflect the course content specifications, then the pretests are administered in college classrooms. Test item statistics, including difficulty and discrimination, are calculated, and only items that meet acceptable statistical criteria are added to the final pool of test items to be available for inclusion in operational test forms. Final AP test forms are assembled based on content and statistical specifications. The third stage consists of setting grading standards through the use of college comparability studies. ETS and AP development committees collaborate on establishing grading standards to ensure AP scores are valid measures of college-level performance. College comparability studies begin with administration of newly created AP examinations to college students in corresponding college courses. For example, an AP psychology examination would be administered to college students in an introductory-level college psychology course. The students' raw scores on the AP examinations would then be compared with their grades in the course. The average AP raw score among students who receive an "A" in the course then becomes the minimum cutoff for a standard score of 5 on the AP examination. The average AP raw score among students who receive a " B " in the course then becomes the minimum cutoff for a standard score of 4 on the AP examination, and so on for standard scores of 3,2 , and 1 . After the initial development of an

## Siemens Awards for Advanced Placement

The Siemens Foundation, established in 1998, is a nonprofit organization affiliated with the Siemens Corporation, the U.S. holding company for Siemens AG, the electronics and electrical engineering group. The foundation supports educational initiatives in the United States in the areas of science, technology, engineering, and mathematics (Siemens Foundation, 2010a). Each year, the foundation provides awards to students who obtain the greatest number of scores of 5 on the following eight Advanced Placement (AP) mathematics and science examinations: Biology, Calculus BC, Chemistry, Computer Science A, Environmental Science, Physics C: Mechanics, Physics C: Electricity and Magnetism, and Statistics (Siemens Foundation, 2010b). Potentially, each state has two student recipients, one male and one female, who each receive a $\$ 2,000$ scholarship. Two additional national recipients are awarded $\$ 5,000$ scholarships. Any enrolled or home-schooled high school student who has taken any of the eight qualifying AP examinations during the award year is eligible for the award.

The Siemens Foundation no longer offers the Siemens Awards for AP Teachers. The foundation encourages AP teachers to explore Science, Technology, Engineering, and Mathematics (STEM) professional development opportunities in lieu of the AP award (College Board, 2010j). These opportunities include the first online shared repository of STEM best teaching practices, an ongoing webinar series featuring leading scientists and experts in their fields, the Siemens Teachers as Researchers (STARs) Program, and the STEM Institute. For more information on these programs, visit siemensstemacademy.com.
examination, college comparability studies are conducted only intermittently to recalibrate scores. Year-to-year scoring standards are maintained through test equating procedures to ensure that scores have the same meaning from one year to the next.

## International Baccalaureate Diploma Programme

The IB Diploma Programme uses three types of assessments to evaluate student mastery of IB course material: internal assessments, standardized examinations, and non-examination components. Internal assessments include oral presentations, art and music portfolios, and writeups of experimental results; they are overseen and scored by the local teacher of a course. Nonexamination components include extended essays, theory of knowledge essays, language world literature assignments, language written tasks, and music investigations; they are assessed externally by an IB examiner. Standardized examinations include the traditional formats of multiple-choice, short-response, and essay questions; they are administered locally but scored externally. Because standardized examinations are assumed to be the most objective and reliable of the three types of assessment, their results account for the largest portion of final student scores.

Examination questions are developed during the 18 to 24 months prior to the administration of an examination by a team of senior examiners, IB staff, and external consultants. After initial examination drafts are completed, editing meetings are held to review items for attributes such as course content coverage and lack of bias. Revised drafts are sent to external advisors for review
and, after final revisions have been made, examinations are sent to a production department for formatting, typesetting, and printing. Finally, the examinations are translated into French and Spanish, reviewed one more time for translation accuracy, and delivered to schools. For open-ended and non-multiple-choice items, detailed scoring criteria are provided to examiners so the items can be scored as objectively as possible. Raw scores for each assessment are converted to standard scores ranging from 1 to 7 , which are then combined to create a final score (Table 1).

Most diploma candidates complete all six subject-area assessments in May at the end of the two-year program, but some choose to take one or two examinations at the end of their first year. Candidates complete the standardized assessments over a two-day period and are tested for no more than six hours each day.

## Examination Fees

## Advanced Placement Program

For the 2009-10 school year, the fee for each AP examination was $\$ 86$. TEA assumed $\$ 30$ of the cost of every AP examination taken by an eligible Texas public school student, which reduced the cost to $\$ 56$ per examination (D. Gonzales, personal communication, March 15, 2010). To be eligible for this TEA program, a student must have taken an AP course at a Texas public school or been recommended by his or her principal or teacher to take the examination (TEC $\S 28.053,2010$ ).

Students in financial need received further reductions. Qualifying low-income students received a $\$ 22$ fee reduction from the College Board. In addition, through a U.S. Department of Education grant, TEA paid an additional $\$ 18$ for each examination taken by a student who qualified for the College Board fee reduction. To qualify for this fee reduction, a student must have been eligible for free or reduced-priced lunch under the National School Lunch Act. Additionally, testing centers may have chosen to waive the $\$ 8$ administrative fee, bringing the AP examination cost to $\$ 8$ for low-income students.

## International Baccalaureate Diploma Programme

For the 2009-10 school year, the fee for each IB examination was $\$ 92$. TEA assumed $\$ 30$ of the cost of every IB examination taken by an eligible Texas high school student, which reduced the cost to $\$ 62$ per examination (D. Gonzales, personal communication, March 15, 2010). To be eligible for this TEA program, a student must have taken an IB course at a Texas public school or been recommended by his or her principal or teacher to take the examination (TEC §28.053, 2010).

Students in financial need received further reductions. Qualifying low-income students received an $\$ 18$ fee reduction through a U.S. Department of Education grant, bringing the IB examination cost to $\$ 44$ for low-income students (D. Gonzales, personal communication, March 15, 2010).

# Policy Related to Access to Advanced Placement and International Baccalaureate Programs 

College Board Policy

State Policy

Federal Policy

## College Board Policy

In an effort to promote participation in the Advanced Placement (AP) Program by traditionally underserved populations, the College Board provides fee assistance to students in financial need (College Board, 2011e) and offers programs, such as the AP Fellows Program, to teachers (College Board, 2011c). The AP Fellows Program provides teachers with funding to help pay the cost of attending the AP Summer Institutes. Eligible teachers are those who plan to teach AP courses in schools that serve student groups that have been traditionally underrepresented in AP courses. The institutes provide subject-specific professional development opportunities related to teaching AP courses.

## State Policy

## Texas Advanced Placement Incentive Program

Purpose. The Texas AP Incentive Program was created in 1993 by the 73rd Texas Legislature to recognize and reward students, teachers, and schools that demonstrate success in achieving the educational goals of the state (Texas Education Code [TEC] §§35.001-35.008, 1994; Title 19 of the Texas Administrative Code [TAC] §74.29, 1996). The International Baccalaureate (IB) Diploma Programme was added to the AP Incentive Program by the 74th Texas Legislature in 1995 (TEC $\S \S 28.051-28.058,1996$ ). In 2001, State Board of Education (SBOE) rules implementing the AP Incentive Program were amended to include IB (19 TAC $\S 74.29,2002)$.

Awards and subsidies. Six types of awards may be funded under the AP Incentive Program (TEC §28.053, 2010). Funding of individual components of the AP Incentive Program during each fiscal biennium is subject to legislative appropriations (Table A-2 in Appendix A). Teachers may receive subsidies of up to $\$ 450$ for Pre-AP, AP, Pre-IB, or IB teacher training sponsored or endorsed by the College Board or International Baccalaureate (IB). Teachers may also receive a share of the teacher bonus pool proportional to the number of classes taught (TEC §28.053, 2010). Participating schools may receive up to $\$ 100$ for each student who receives a score of at least 3 on an AP examination or 4 on an IB examination. Awards received by schools must be used for the sole purpose of academic enhancement, and school principals must establish campus teams to determine the uses of funds awarded (TEC $\$ 28.053,2010$; TEC $\S 28.055,2010$ ). A one-time $\$ 3,000$ equipment grant for providing a College Board AP course or IB course, based on need as determined by the commissioner of education, was funded from the 1998-1999 fiscal biennium through the 2002-2003 fiscal biennium. (K. Callaway, personal communication, January 6, 2011) Two types of awards specified in the AP Incentive Program have never been funded by the state: (1) a one-time award of $\$ 250$ for teaching an AP or IB course for the first time; and (2) a testing fee reimbursement, not to exceed $\$ 65$, for a student receiving a score of at least 3 on an AP examination or 4 on an IB examination.

The AP Incentive Program also includes subsidies for AP and IB examinations. Subsidies are available to all examinees in Texas public schools, with greater subsidies available to examinees
who exhibit financial need (TEC $\S 28.053$, TEC $\S 28.054,2010$ ). The SBOE is responsible for adopting guidelines for determining financial need that are consistent with College Board and IB definitions of financial need. TEA allocates $\$ 30$ for each AP and IB examination taken by Texas public school students who participate in AP or IB courses or are recommended by their principals or teachers. Additionally, a student who qualifies under the College Board criteria for financial need is eligible for an additional $\$ 22$ fee reduction from the College Board and an additional $\$ 18$ fee reduction from TEA through a U.S. Department of Education grant (D. Gonzales, personal communication, March 15, 2010).

With subsidies provided by the AP Incentive Program, AP examinees in 2009-10 who met financial need criteria and took AP courses corresponding with the tests paid no more than $\$ 8$ per AP examination. Support from the program also ensured that all other AP examinees taking AP courses in corresponding subject areas paid no more than $\$ 56$ per examination. Students in financial need who took IB courses corresponding with the tests paid no more than $\$ 44$ per examination in 2009-10; all other IB examinees paid no more than $\$ 62$ per examination.

History of funding. The AP Incentive Program was first implemented in the 1994-1995 fiscal biennium under the authority of TEC $\S 35.001$ (1994).

1994-1995 fiscal biennium. One million dollars of the appropriation for Gifted and Talented education was transferred and reallocated to TEA for the purpose of implementing the AP Incentive Program (General Appropriations Act, 73rd Texas Legislature). A separate and additional source of funding for the program was recommended by the SBOE in 1994.

1996-1997 fiscal biennium. Two million dollars from the appropriation for Gifted and Talented education was allocated for the AP Incentive Program (General Appropriations Act, 74th Legislature) (Figure 1 on page 16).

1998-1999 fiscal biennium. A total of $\$ 3$ million was appropriated for the program. Two million dollars was again transferred from the Gifted and Talented appropriation; in addition, $\$ 500,000$ for each year of the biennium was allocated from funds appropriated for the Foundation School Program (General Appropriations Act, 75th Texas Legislature).

2000-2001 fiscal biennium. Funding for the AP Incentive Program received a substantial increase to $\$ 21$ million. In addition to $\$ 2$ million allocated from the Gifted and Talented fund, $\$ 19$ million was allocated in fiscal year (FY) 2000 and FY 2001 ( $\$ 8$ million and $\$ 11$ million, respectively) from the Foundation School Program (General Appropriations Act, 76th Texas Legislature).

2002-2003 fiscal biennium. A total of $\$ 34$ million was appropriated for the AP Incentive Program. One million dollars per year was allocated from the Gifted and Talented fund for the AP Incentive Program and pre-AP and IB activities. From the Foundation School Program, $\$ 14.5$ million was allocated for FY 2002 and $\$ 17.5$ million was allocated for FY 2003. Additional support for AP and IB programs came from funds appropriated for textbook expenditures (General Appropriations

Figure 1
State Funding for Advanced Placement (AP)/International Baccalaureate (IB) Programs, Texas Public Schools, 1996-1997 Through 2010-2011 Biennia

Source. General Appropriations Act, 74th Texas Legislature; General Appropriations Act, 75th Texas Legislature; General Appropriations Act, 76th Texas Legislature; General Appropriations Act, 77th Texas Legislature; General Appropriations Act, 78th Texas Legislature; General Appropriations Act, 79th Texas Legislature; General Appropriations Act, 80th Texas Legislature; and General Appropriations Act, 81st Texas Legislature.

Act, 77th Texas Legislature). According to Rider 29, funding priority for teacher training was to be given to teachers at public school campuses not offering AP or IB courses. The rider also provided for making AP and IB courses available at as many public schools as possible, "without regard to the rural/urban status of the campus and the socioeconomic status of its students" (p. III-13).

2004-2005 fiscal biennium. Funding decreased to $\$ 27$ million; $\$ 13.5$ million per year was allocated from the Foundation School Program for pre-AP and IB activities and the AP Incentive Program. Unlike in previous years, no additional funding was appropriated from the Gifted and Talented fund. Any funds allocated for FY 2004 but not used by August 31, 2004, were appropriated for FY 2005 (General Appropriations Act, 78th Texas Legislature).

2006-2007 fiscal biennium. Funding remained at $\$ 27$ million: $\$ 13.5$ million per year was allocated from the Foundation School Program to support pre-AP and IB activities and the AP Incentive Program (General Appropriations Act, 79th Texas Legislature). Based on Rider 27, TEA continues to give funding priority to examination fee subsidies for students and to training for teachers at public school campuses not offering AP or IB courses. Rider 27 also restates the goal of providing student access to AP and IB courses at as many public schools as possible (p. III-11).

2008-2009 fiscal biennium. Funding increased to $\$ 28.4$ million; out of the funds appropriated in Strategy A.2.1, Student Success, $\$ 14.2$ million in fiscal year 2008 and $\$ 14.2$ million in fiscal year 2009 was allocated for both pre-Advanced Placement/International Baccalaureate activities and for the Advanced Placement Incentive Program (General Appropriations Act, 80th Texas Legislature). Rider 25 also states that examination fee subsidies for students should be the priority for the allocated
funds. For funds allocated to teacher training, funding priority should be given to teachers at public school campuses that do not currently offer Advanced Placement/International Baccalaureate courses (p. III-11).

2010-2011 fiscal biennium. Funding remained at $\$ 28.4$ million; out of the funds appropriated in Strategy A.2.1, Statewide Educational Programs, $\$ 14.2$ million in fiscal year 2010 and $\$ 14.2$ million in fiscal year 2011 was allocated for both pre-Advanced Placement/International Baccalaureate activities and for the Advanced Placement Incentive Program (General Appropriations Act, 81st Texas Legislature). Rider 24 also states that examination fee subsidies for students should be the priority for the allocated funds. For funds allocated to teacher training, funding priority should be given to teachers at public school campuses that do not currently offer Advanced Placement/ International Baccalaureate courses (p. III-10).

## Federal Policy

The federal AP fee assistance program was authorized by Congress in the 1992 Higher Education Act and funded for the first time in federal FY 1998. It was first implemented in 34 states, including Texas, to provide fee assistance for low-income students, defined as students whose family incomes were at or below the Census Bureau definition of the poverty threshold. The secretary of education expanded the program to include students with financial need taking IB examinations. In federal FY 2009, the U.S. Department of Education awarded $\$ 1,383,940$ to Texas for the AP and IB fee assistance program (United States Department of Education, 2011a). In FY 2010, Texas was awarded $\$ 1,706,421$ for the program (United States Department of Education, 2011b).

The U. S. Department of Education also awards grants as part of its Advanced Placement Incentive Program (U.S. Department of Education, 2010a). These grants were designed to provide assistance to students from low-income families, encourage their enrollment and participation in the AP Program, and increase the availability of AP courses in schools serving low-income areas. In federal FY 2009, the U. S. Department of Education awarded \$4,030,636 to Texas for the Advanced Placement Incentive Program (U.S. Department of Education, 2011c). In federal FY 2010, Texas was awarded $\$ 3,736,185$ for the program.

# Policy Related to Uses of Advanced Placement and International Baccalaureate Examination Results 

Texas College Admissions Policy

Academic Excellence Indicator System Measures

## Texas College Admissions Policy

In 2005, the 79th Legislature passed a mandate requiring all public institutions of higher education in Texas that provide freshman-level courses to develop and implement policy granting college credit to entering students who have successfully completed the International Baccalaureate (IB) Diploma Programme or have achieved qualifying scores on one or more Advanced Placement (AP) examinations (Texas Education Code [TEC] §51.968, 2005). Additionally, the legislation requires colleges and universities to grant at least 24 hours of credit to entering students who have obtained an IB Diploma and received scores of at least 4 on all examinations taken to achieve the diploma.

The American Council on Education recommends a minimum number of college credit hours to be granted for AP examination scores of 3 or higher (American Council on Education, 2008). Colleges that recognize IB scores usually award credit or advanced placement to students who score in the 4-7 range on IB examinations. Each college and university determines its own policies regarding the use of data on course and examination participation and performance to evaluate the abilities of applicants and admitted students (College Board, 2010i). Students can contact colleges or universities for information about specific academic policies related to AP and IB courses and examinations, or they can visit the College Board website to find the policies different colleges and universities have in place for granting AP credit (College Board, 2010c).

The State Board of Education (SBOE) encourages high schools to participate in the programs by allowing AP and IB courses to satisfy high school graduation requirements (Title 19 of the Texas Administrative Code [TAC] §§74.11-74.13, 2009).

## Academic Excellence Indicator System Measures

The goals for public education in Texas are supported by an integrated state accountability system known as the Academic Excellence Indicator System (AEIS). AEIS is a comprehensive, statewide system that reports district and campus performance on all indicators used for Texas public school accountability. Through AEIS, Texas recognizes, rewards, sanctions, and intervenes with school districts and campuses to ensure excellence in education for all students. Three types of indicators are used in AEIS reports: base, Gold Performance Acknowledgment, and report-only (Texas Education Agency [TEA], 2010d).

AP examination results are used as one of many indicators of educational progress and comparative performance. AP examinations measure college-level achievement in a broad array of subject areas. The results provide valuable information to high schools about preparing students for academic challenges beyond the secondary school level. In April 1996, the SBOE approved inclusion of 11 th- and 12 th-grade student participation in, and performance on, AP examinations as an indicator in the AEIS. The indicator was made up of three measures to be reported at the district, region, and state levels: the percentage of non-special education students taking at least one AP examination, the percentage of examinations with scores of 3 or above, and the percentage of examinees with at least
one score of 3 or above. At the time, not all schools participated in the AP Program. As a result, the indicator was defined as "report-only" and not used for campus and district ratings.

The SBOE recommended the incorporation of IB participation and performance within two years. In the fall of 1998, the indicator was revised to include IB and was defined as follows:

- the percentage of non-special education 11th and 12th graders taking at least one AP or IB examination;
- the percentage of non-special education examinees scoring 3 or above on at least one AP examination or 4 or above on at least one IB examination; and
- the percentage of total AP examinations with scores of 3 or above and IB examinations with scores of 4 or above.

In 2001, the Texas Legislature enacted the Gold Performance Acknowledgment (GPA) system to acknowledge districts and campuses for high performance on indicators not used to determine accountability ratings (TEC, $\S 39.0721,2002$ ). Included in the GPA is an indicator made up of two measures: the percentage of non-special education students who take an AP or IB examination and the percentage of non-special education examinees who perform at or above the criterion score of 3 on at least one AP examination or 4 on at least one IB examination.

For acknowledgment on the GPA indicator, the following two criteria must be met for all students and separately for African American, Hispanic, and White students:

- Non-special education 11th and 12th graders taking at least one AP or IB examination must represent 15.0 percent or more of the non-special education students enrolled in 11th and 12th grades, and
- Fifty percent or more of the non-special education examinees must have at least one score of 3 or above on an AP examination or 4 or above on an IB examination.

# Data Sources and Methodological Considerations 

Data Sources

Data Limitations

Reporting of Scores

Coding and Reporting of Race/Ethnicity

## Data Sources

Advanced Placement (AP) test data for Texas public high school examinees were provided to the Texas Education Agency (TEA) by the College Board. International Baccalaureate (IB) test data for Texas public high school examinees were provided to TEA by International Baccalaureate (IB). AP and IB results for Texas public high school examinees in previous years were obtained from TEA reports (2001, 2002, 2003, 2004, 2005, 2006a, 2007a, 2008, 2009, 2010a). AP results for all public and nonpublic school examinees in Texas and the United States were obtained from summary reports released annually by the College Board and Educational Testing Service (2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010). Comparable reports were not available for IB performance.

In the section of this report titled "Results for Texas Public Schools," data on student grade level, race/ethnicity, economic status, and gender, as well as other relevant district, campus, and student information, were obtained from the TEA Public Education Information Management System (PEIMS). The College Board also collects student grade level, ethnicity, and gender information for AP examinees; these data were used when they were not available in PEIMS. IB does not collect this information.

## Data Limitations

In a small percentage of cases, student demographic data were not available in PEIMS or from the College Board. As a result, sums of Texas public school examinees by race/ethnicity, by economic status, or by gender may differ from one another or be slightly less than the total of all examinees.

## Reporting of Scores

The College Board AP Program offered 33 subject examinations across six academic areas in the 2009-10 school year. The International Baccalaureate Diploma Programme offered subject examinations across six academic areas in the 2009-10 school year. Students may take AP and IB subject examinations only once per school year. Students who have valid AP scores in the range of 1 to 5 or valid IB scores in the range of 1 to 7 for at least one examination taken in the current school year are counted as examinees that year. Counts of examinations are based on the number of examinations taken in the current school year that received valid scores. Examination counts are higher than examinee counts, because some examinees take more than one subject examination. Although most students participate in AP courses before having taken the corresponding examinations, they may take AP examinations without having taken the course.

For two AP examinations, Music Theory and Calculus BC, students receive examination subscores in addition to overall examination scores. Students who take the Music Theory examination receive aural and non-aural subscores. Students who take the Calculus BC examination receive

Calculus AB subscores in addition to Calculus BC scores. By TEA convention, subscores were included with overall examination scores in all calculations during the period 1994-95 through 2002-03. Since the 2003-04 school year, subscores have no longer been included in the calculations.

There are two AP Physics C examinations: the Mechanics examination and the Electricity and Magnetism examination. Each of the two examinations is applicable to a single semester of a yearlong AP Physics C course, and students can choose to take one or both of the examinations. Generally in this report, counts of examinations include both Physics $C$ examinations when students have scores for both. In Table A-12 in Appendix A, however, the counts of examinations include only one of the two Physics C examinations when students have scores for both. This is because the table provides a count of instances in which there is a one-to-one relationship between a student's participation in an examination and his or her participation in the corresponding course.

AP and IB courses can be one or more semesters in length. For a course that extends over more than one semester, completion of the course is defined as successful completion of all semesters of the course. For example, a student is counted as having completed AP United States History, a twosemester course, only after completing both the first and second semesters of the course. In addition, successful completion of a course requires a student to meet "... the standard requirements of the course, including demonstrated proficiency in the subject matter ..." (Title 19 of the Texas Administrative Code [TAC] §74.26, 2009).

When comparing performance measures within a student group over time, the reliability of such comparisons are dependent on the size of the group. The smaller the student group the less reliable the comparisons within that group over time become. Caution should be used when interpreting year-to-year change.

When comparing performance measures across student groups, the appropriateness of comparisons is dependent on the sizes of all groups. When groups differ substantially in size, comparisons of performance changes between them can be misleading and generally are not recommended. Because of the interpretive difficulties resulting from the small sizes of some of the racial/ethnic student and examinee populations, such as American Indians and Pacific Islanders, performance results for these groups are not discussed.

## Coding and Reporting of Race/Ethnicity

School districts report student demographic information to the Texas Education Agency (TEA) through the Public Education Information Management System (PEIMS). The data are submitted each school year at the end of the fall semester and in the summer. Prior to the 2009-10 school year, TEA required that districts report one of five racial/ethnic categories for each student enrolled. Those categories were: (1) American Indian or Alaska Native, (2) Asian or Pacific Islander, (3) Black or African American (not of Hispanic origin), (4) Hispanic/Latino, and (5) White (not of Hispanic origin).

Starting with the 2009-10 school year, TEA began collecting race and ethnicity in compliance with a new federal standard (TEA, 2010c). The federal standard requires that race and ethnicity be collected separately using a specific two-part question, presented in a specific order, and that both parts of the question be answered.

Part 1. Ethnicity: Is the person Hispanic/Latino? Choose only one.

- Hispanic/Latino
- Not Hispanic/Latino

Part 2. Race: What is the person's race? Choose one or more, regardless of ethnicity.

- American Indian or Alaska Native
- Asian
- Black or African American
- Native Hawaiian/Other Pacific Islander
- White

The Hispanic/Latino ethnic group includes students of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race. The American Indian or Alaska Native racial group includes students having origins in any of the original peoples of North and South America (including Central America), and who maintain a tribal affiliation or community attachment. The Asian racial group includes students having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent. The Black or African American racial group includes students having origins in any of the black racial groups of Africa. The Native Hawaiian or Other Pacific Islander racial group includes students having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. The White racial group includes students having origins in any of the original peoples of Europe, the Middle East, or North Africa. Of the racial/ethnic group definitions, only the definition for the American Indian or Alaska Native racial group differs from that used in previous years. Prior to 2009-10, the definition for this group included only the original peoples of North America.

Although the historical AP and IB examination participation and performance results presented in this report are not affected by the change to the collection of racial/ethnic information, presentations of information for the 2009-10 school year are. Three important differences result. The first is that results for students who were previously classified as Asian/Pacific Islander are now presented in one of two categories, either Asian or Pacific Islander. Second, any students who selected more than one race are reported in a "two or more races" category.

The third important difference is based on the fact that students who were once classified exclusively as "Hispanic" are now classified under a racial category, as well. As a result, in addition to the overall Hispanic group results, participation and performance information for each race within the Hispanic ethnic category are presented. It is also important to note that results for any examinees for whom racial information was not available are included in an "unknown" category.

Throughout this report, students classified in PEIMS as Hispanic/Latino are referred to as Hispanic; students classified as American Indian or Alaska Native are referred to as American Indian;
students classified as Black or African American are referred to as African American; students classified as Native Hawaiian/Other Pacific Islander are referred to as Pacific Islander; and students classified as having two or more races are referred to as multiracial.

## Gold Performance Acknowledgment

The Academic Excellence Indicator System (AEIS) reports results for Texas public school students who take Advanced Placement (AP) examinations, International Baccalaureate (IB) examinations, or both AP and IB examinations. Combined results of AP and IB examination participation and performance are used as indicators for Gold Performance Acknowledgment (GPA) (see the section, "Academic Excellence Indicator System Measures," on page 20). GPA indicators are reported for all examinees and for the three student groups included in determining school and district ratings: African American, Hispanic, and White examinees. The indicators include the percentage of students in 11th and 12th grade participating in at least one AP or IB examination, the percentage of examinees meeting or exceeding the criterion score, and the percentage of examinations with scores at or above the criterion score.

## State Summary

In the 2009-10 school year, 121,136 Texas public school students in 11th and 12th grade took 259,810 Advanced Placement (AP) and International Baccalaureate (IB) examinations (Table A-3 in Appendix A). The percentage of Texas public school 11th and 12th graders participating in at least one AP or IB examination increased by 1.5 percentage points, from 21.2 percent in 2008-09 to 22.7 percent in 2009-10 (Figure 2 on page 31 and Table A-3 in Appendix A). Over the 10-year period between 1999-00 and 2009-10, the participation rate rose 10.0 percentage points, from 12.7 percent to 22.7 percent.

The percentage of examinees scoring at or above criterion on at least one AP or IB examination decreased by 0.4 percentage points from 51.2 percent in 2008-09 to 50.8 percent in 2009-10 (Figure 3 on page 32 and Table A-3 in Appendix A). The percentage of all AP or IB examinations with scores at or above criterion decreased by 0.7 percentage points from 47.4 percent in 2008-09 to 46.7 percent in 2009-10 (Table A-3 in Appendix A).

## Combined Participation and Performance by RacelEthnicity

Prior to the 2009-10 school year, the Texas Education Agency (TEA) required classification of students as either African American (of non-Hispanic origin), Asian/Pacific Islander, Hispanic, Native American, or White (of non-Hispanic origin). In the 2009-10 school year, TEA began collecting racial and ethnic information separately, and allowed for identification of more than one race for an individual student (see the section, "Data Sources and Methodological Considerations," on page 23). Using this new information, Texas public school students may be classified by race/ethnicity, where ethnicity includes Hispanic and not Hispanic, and race includes African American, American Indian, Asian, Pacific Islander, and White. In addition, students may be

Figure 2

Note. Racial groups (African American, American Indian, Asian/Pacific Islander, and White) do not include students of Hispanic ethnicity.
classified as having two or more races. In this report, results for all school years prior to 2009-10 are based on the old groupings, and results for 2009-10 are based on the new racial/ethnic groupings.

In 2009-10, among non-Hispanic students, 53.6 percent of Asian, 27.0 percent of multiracial, 25.9 percent of White, 25.6 percent of Pacific Islander, 19.4 percent of American Indian, and 14.5 percent of African American students took at least one AP or IB examination (Table A-3 in Appendix A). Between 2008-09 and 2009-10, the percentage of White students participating in at least one AP or IB examination increased from 25.1 percent to 25.9 percent, and the percentage of African American students increased from 12.9 percent to 14.5 percent.

Overall, 19.6 percent of Hispanic students took at least one AP or IB examination. The percentage of Hispanic students participating in at least one AP or IB examination increased from 17.3 percent in 2008-09 to 19.6 percent in 2009-10. Within the Hispanic group, 31.0 percent of Asian, 24.7 percent of multiracial, 19.3 percent of White, 17.6 percent of African American, 17.5 percent of American Indian, and 17.0 percent of Pacific Islander students took at least one AP or IB examination.

In 2009-10, among non-Hispanic examinees, 69.0 percent of Asians, 63.1 percent of Whites, and 25.7 percent of African Americans received at least one score at or above criterion. Between 2008-09 and 2009-10, the percentage of White examinees receiving at least one score at or above

Figure 3

Note. Racial groups (African American, American Indian, Asian/Pacific Islander, and White) do not include students of Hispanic ethnicity.
criterion increased from 61.7 percent to 63.1 percent, and the percentage of African American examinees receiving at least one score at or above criterion increased from 25.5 percent to 25.7 percent.

Overall, 37.3 percent of Hispanic examinees received at least one score at or above criterion in the 2009-10 school year. This was a decrease of 0.2 percentage points from the 37.5 percent of Hispanic examinees who received at least one score at or above criterion in 2008-09. Within the Hispanic group, 43.6 percent of multiracial examinees, 38.0 percent of American Indian examinees and 36.6 percent of White examinees received at least one score at or above criterion.

## Advanced Placement Participation and Performance

## Examinees in Grades 11 and 12

State summary. In 2009-10, a total of 119,743 11th and 12th grade students in 1,007 Texas public schools took 251,614 AP examinations (Table 2). Between 2008-09 and 2009-10, patterns of AP participation and performance among Texas public school 11th and 12th graders were similar to the patterns for AP and IB combined discussed in the previous section. The percentage of students participating in at least one AP examination increased from 21.0 percent in 2008-09 to 22.5 percent

Note. Sums of examinees by race/ethnicity, by economic status, or by gender may differ from one another or be slightly less than the total of all examinees. See the section, "Data Sources and Methodological Considerations," on page 23, for additional information. Racial groups (African American, American Indian, Asian, Pacific Islander, White, and multiracial) that are not shown as Hispanic subgroups do not include students of Hispanic ethnicity. ${ }^{a}$ Not applicable.
in 2009-10 (Figure 4 on page 34 and Table A-4 in Appendix A). The percentage of AP examinees scoring in the 3-5 range on at least one examination decreased from 50.7 percent in 2008-09 to 50.1 percent in 2009-10 (Figure 5 on page 35 and Table A-4 in Appendix A).

Of the 33 AP examinations taken by Texas public school 11th and 12th graders in 2009-10, the 5 most popular for 11th graders, in rank order, were: English Language and Composition, United States History, Spanish Language, Psychology, and Chemistry (Table A-5 in Appendix A). For 12th graders the 5 most popular, in rank order, were: English Literature and Composition, Government and Politics: U.S., Macroeconomics, Calculus AB , and Statistics.

Figure 4
Advanced Placement (AP) Examination Participation, Grades 11 and 12, by Race/Ethnicity, Texas Public Schools, 1999-00 Through 2009-10

Source. College Board and Texas Education Agency.
Note. Racial groups (African American, American Indian, Asian/Pacific Islander, and White) do not include students of Hispanic ethnicity.

Participation and performance by race/ethnicity. Among non-Hispanic students in Grades 11 and 12, 52.5 percent of Asians, 26.7 percent of multiracial students, 25.6 percent of Whites, 22.5 percent of Pacific Islanders, 19.2 percent of American Indians, and 14.3 percent of African Americans participated in at least one AP examination in 2009-10 (Table 2 on page 33). Between 2008-09 and 2009-10, the percentage of White students participating in at least one AP examination increased from 24.8 percent to 25.6 percent, and the percentage of African American students participating in at least one AP examination increased from 12.7 percent to 14.3 percent (Figure 4 on this page and Table A-4 in Appendix A).

The percentage of Hispanic students participating in at least one AP examination increased from 17.1 percent in 2008-09 to 19.4 percent in 2009-10. Within the Hispanic group, the AP examination participation rate in 2009-10 was highest for Asian students ( $30.9 \%$ ), followed by multiracial (24.6\%), White (19.2\%), African American (17.5\%), American Indian (17.3\%), and Pacific Islander students (17.0\%).

Among non-Hispanic examinees, in 2009-10, the percentage of examinees scoring in the 3-5 range on at least one examination was 68.1 percent for Asian, 62.6 percent for White, and 24.8 percent for African American examinees (Table 2 on page 33). Between 2008-09 and 2009-10, the percentage of White examinees scoring in the 3-5 range on at least one examination increased

Figure 5
Advanced Placement (AP) Examinee Performance, Grades 11 and 12, by Race/Ethnicity, Texas Public Schools, 1999-00 Through 2009-10

Source. College Board and Texas Education Agency.
Note. Racial groups (African American, American Indian, Asian/Pacific Islander, and White) do not include students of Hispanic ethnicity.
from 61.3 percent to 62.6 percent, and the percentage of African American examinees scoring in the $3-5$ range on at least one examination remained the same ( $24.8 \%$ ) (Table A-4 in Appendix A).

The percentage of Hispanic examinees scoring in the 3-5 range on at least one examination decreased from 36.9 percent in 2008-09 to 36.7 percent in 2009-10. Within the Hispanic group, the percentage of examinees scoring in the 3-5 range on at least one examination was 37.1 percent for American Indians and 36.1 percent for Whites.

Participation and performance by gender. Among Texas public school 11th and 12th graders in 2009-10, the AP examination participation rate was higher for female students (24.8\%) than male students ( $20.1 \%$ ) (Table A-4 in Appendix A). By contrast, the percentage of AP examinees scoring in the 3-5 range on at least one examination was higher for male examinees ( $52.0 \%$ ) than female examinees ( $48.7 \%$ ). Between 2008-09 and 2009-10, however, the percentage of AP examinees scoring in the 3-5 range on at least one examination decreased by 1.3 percentage points from 53.3 percent for males and remained the same for female examinees.

Participation and performance by economic status. Among Texas public school 11th and 12th graders in 2009-10, AP examination participation and performance results were considerably lower for students classified as economically disadvantaged than students not classified as economically disadvantaged (Table 2 on page 33). Economically disadvantaged students participated in at least one AP examination at a rate of 16.3 percent, compared to 26.3 percent for students who
were not economically disadvantaged. Compared to 59.2 percent of examinees who were not economically disadvantaged, 32.2 percent of economically disadvantaged examinees scored in the $3-5$ range on at least one examination.

## Examinees in Grades 9 and 10

State summary. In 2009-10, the AP examination participation rate for Texas public school 9th and 10th graders was 6.8 percent (Table 3). A total of 44,244 9th and 10th grade students in 695 schools took 49,438 examinations. Of the examinees, 44.4 percent $(19,650)$ received at least one score in the 3-5 range. The five most popular AP examinations among 10th-grade examinees, in rank order, were: World History, Spanish Language, English Language and Composition, Computer Science A, and Human Geography (Table A-5 in Appendix A). The five most popular AP examinations among ninthgrade examinees, in rank order, were: Human Geography, Spanish Language, World History, Spanish Literature, and Computer Science A.

Participation and performance by race/ethnicity. Among Texas public school non-Hispanic 9th and 10th graders, the AP examination participation rate in 2009-10 was highest for Asian students ( $21.7 \%$ ), followed by multiracial ( $8.8 \%$ ), White ( $7.5 \%$ ), American Indian (5.3\%), Pacific Islander (4.6\%), and African American students (3.7\%) (Table 3). Overall, Hispanics participated at a rate of 6.0 percent, and within the Hispanic group, 9.2 percent of Asian, 6.1 percent of multiracial, 5.9 percent of White, 5.2 percent of American Indian, 4.6 percent of African American, and 4.4 percent of Pacific Islander students participated.

The percentage of non-Hispanic AP examinees scoring in the 3-5 range on at least one examination was 62.3 percent for Asians, 49.2 percent for Whites, and 20.1 percent for African American examinees. Overall, the percentage of Hispanic AP examinees scoring in the 3-5 range was 39.6 percent. Within the Hispanic group, 41.3 percent of American Indian and 38.8 percent of White examinees scored in the 3-5 range.

Participation and performance by gender. Among Texas public school 9th and 10th graders in 2009-10, the AP examination participation rate was higher for female students ( $7.5 \%$ ) than male students (6.1\%) (Table 3). By contrast, the percentage of AP examinees scoring in the 3-5 range on at least one examination was higher for male examinees (47.4\%) than female examinees ( $42.0 \%$ ).

Participation and performance by economic status. Among Texas public school 9th and 10th graders in 2009-10, economically disadvantaged students participated in at least one AP examination at a rate of 4.5 percent, compared to 8.6 percent for students who were not economically disadvantaged (Table 3). Compared to 48.6 percent of examinees who were not economically disadvantaged, 37.1 percent of economically disadvantaged examinees scored in the 3-5 range on at least one examination.

## Examinees in Grade 8

Texas Middle School Program for Advanced Placement Spanish. Historically, some groups, such as African Americans and Hispanics, have not been well-represented in college preparatory classes offered in Texas public schools. To increase participation in advanced classes by Spanish-speaking students, the Texas Education Agency (TEA) created the Texas Middle School Program for Advanced Placement (AP) Spanish in 2000 with a grant from the U.S. Department of Education. The purpose of the program is to provide Spanish-speaking middle school students the opportunity to participate in AP Spanish language courses. The long-term goal is to encourage students to participate in advanced courses in high school after having completed advanced-level
coursework in middle school (TEA, 2006c). In 2000-01, the program was piloted in 17 middle schools in seven districts. In 2002, TEA awarded two-year grants to an additional 13 sites. In March 2005, TEA awarded planning grants to 59 schools, some of which had participated in the pilot or scale-up phase. Between 2000-01 and 2005-06, the proportion of students who scored at least 3 on the AP Spanish Language examination ranged from 78 percent to 95 percent (TEA, 2007c).

In 2005, an evaluation of the long-term impact of the program was conducted (TEA, 2006b). The evaluation focused on data from three cohorts of students at the pilot campuses: students who participated in the program in 2000-01, those who participated in 2001-02, and those who participated in 2002-03. The evaluation reported that students who participated in the Texas Middle School Program for Advanced Placement (AP) Spanish were more likely than their peers to complete one or more AP courses in high school. Likewise, students who participated in the program were more likely than their peers to graduate early and/or graduate under the Distinguished Achievement Program. In addition, survey data indicated that student self-confidence and motivation, as well as academic self-image, were positively affected by participating in the program.

State summary. In 2009-10, the AP examination participation rate for Texas public school eighth graders was 1.0 percent (Table 4). A total of 3,211 8th grade students in 144 schools took 3,214 examinations. Most of the examinees were Hispanic ( $98.8 \%$ ) and classified as economically disadvantaged $(90.8 \%)$. Of the examinees, 72.3 percent $(2,320)$ received at least one score in the 3-5 range. Economically disadvantaged examinees scored in the 3-5 range at nearly the same rate as examinees who were not economically disadvantaged, 72.4 percent and 70.4 percent, respectively. Economically disadvantaged examinees in Grade 8 had a considerably higher percentage of examinees scoring in the 3-5 range ( $72.4 \%$ ) than economically disadvantaged examinees in Grades 9 and $10(37.1 \%)$, as well as those in Grades 11 and $12(32.2 \%)$. Almost all of the examinations ( $99.5 \%$ ) taken by Grade 8 students were the AP Spanish Language examination.

## International Baccalaureate Participation and Performance

## State Summary

In 2009-10, a total of 2,805 students in Grades 11 and 12 in 40 public schools in Texas took 8,196 IB examinations (Table B-2 in Appendix B and Table 5 on page 40). Over the 10 -year period between 1999-00 and 2009-10, the number of 11th and 12th graders in Texas public schools participating in at least one IB examination increased 232.7 percent, from 843 to 2,805 examinees (Table A-6 in Appendix A).

The percentage of IB examinees scoring in the 4-7 range increased from 87.1 percent in 2008-09 to 87.9 percent in 2009-10 (Table A-6 in Appendix A). The percentage of all IB examinations with scores in the 4-7 range increased from 75.2 percent in 2008-09 to 76.5 percent in 2009-10.

The five most popular IB examinations in 2009-10, in rank order, were: English A1, Higher Level; History: Americas, Higher Level; Spanish B, Standard Level; Mathematics, Standard Level; and Mathematical Studies, Standard Level (Table A-7 in Appendix A). Across the five examinations, the mean score was highest on Mathematical Studies, Standard Level (5.0).

## Participation and Performance by RacelEthnicity

Among non-Hispanic Texas public school 11th and 12th graders, the IB examination participation rate in 2009-10 was highest for Pacific Islander students (4.2\%), followed by Asian ( $2.7 \%$ ), multiracial ( $0.8 \%$ ), White ( $0.6 \%$ ), and African American and American Indian students ( $0.3 \%$ each) (Table 5).

The Hispanic participation rate was 0.3 percent as well, and within the Hispanic student group, Asians participated at a rate of 0.7 percent, American Indians at 0.4 percent, multiracial students at 0.3 percent, and Whites at a rate of 0.2 percent.

In 2009-10, the rate of non-Hispanic IB examinees scoring in the 4-7 range on at least one examination was 92.4 percent for Asians, 89.3 percent for Whites, and 72.2 percent for African American examinees. From the 2008-09 school year to the 2009-10 school year, the rate increased for White examinees by 1.2 percentage points and decreased for African American examinees by 1.9 percentage points (Table A-6 in Appendix A).

Hispanic examinees scored in the 4-7 range at a rate of 86.9 percent in 2009-10. Within the Hispanic group, 87.7 percent of White and 85.8 percent of American Indian examinees scored in the 4-7 range (Table 5). Compared to 2008-09, percentages of examinees scoring in the 4-7 range increased for Hispanic examinees by 2.3 percentage points (Table A-6 in Appendix A).

## Participation and Performance by Gender

Among Texas public school 11th and 12th graders in 2009-10, female students participated in at least one IB examination at a rate of 0.6 percent, compared to 0.4 percent for male students (Table 5). Over the 10-year period between 1999-00 and 2009-10, the number of female examinees increased from 506 to 1,628, and the number of male examinees increased from 336 to 1,158 (Table A-6 in Appendix A).

In 2009-10, the percentage of IB examinees scoring in the 4-7 range, as well as the percentage of all IB examinations scored in the 4-7 range, were higher for female examinees ( $89.1 \%$ and $76.7 \%$, respectively) than male examinees ( $86.4 \%$ and $76.2 \%$, respectively) (Table 5).

## Participation and Performance by Economic Status

Among Texas public school 11th and 12th graders in 2009-10, less than one percent of economically disadvantaged students and less than one percent of students who were not economically disadvantaged participated in at least one IB examination (Table 5). Compared to 81.5 percent of economically disadvantaged examinees, 89.5 percent of examinees who were not economically disadvantaged scored in the 4-7 range on at least one examination.

## Qualification for College Credit

Because many colleges and universities award credit for freshman courses to students who meet the criterion scores on one or more AP or IB examinations, the percentage of all enrolled students who meet the criterion may be viewed as one indicator of college readiness among Texas public high school students. Whereas indicators of performance discussed earlier in this section were based on the percentage of examinees who met the criterion score on an AP or IB examination, this indicator of qualification for college credit is based on the percentage of all students who met the criterion score.

In the 2009-10 school year, 11.5 percent of all Texas public school 11th and 12th graders scored at or above criterion on at least one AP or IB examination (Figure 6 on this page and Table A-8 in Appendix A). Among non-Hispanic students, the percentage was 37.0 percent for Asian, 16.4 percent for White, and 3.7 percent for African American examinees. Overall, Hispanics scored at or above criterion at a rate of 7.3 percent, and within the Hispanic group, 7.1 percent of Whites and 6.7 percent of American Indians scored at or above criterion. Over the 10-year period between 1999-00 and 2009-10, the percentage of all 11th and 12th graders scoring at or above criterion increased by 4.2 percentage points. The percentages also rose across race/ethnicity, with increases ranging from 2.0 percentage points to 7.2 percentage points for non-Hispanic groups (African American and White students, respectively). Additionally, there was an increase of 2.6 percentage points for Hispanic students.

Figure 6
Students Qualifying for College Credit Based on Advanced Placement (AP) or International Baccalaureate (IB) Examination Performance, Grades 11 and 12, by Race/Ethnicity, Texas Public Schools, 1999-00 Through 2009-10

Note. Racial groups (African American, American Indian, Asian/Pacific Islander, and White) do not include students of Hispanic ethnicity.

## Examinee Population Profile

Historically, Hispanic, non-Hispanic African American, and economically disadvantaged students have accounted for smaller proportions of the AP and IB examinee populations than of the overall student population in Texas public high schools. This trend continued in 2009-10. In the following analyses, percentage representation of demographic groups among AP and IB examinees was calculated based on sums of examinees for whom the related demographic data were available.

These sums may differ from one another or be slightly less than the total of all examinees. See the section, "Data Sources and Methodological Considerations," on page 23, for additional information.

African Americans made up 12.9 percent of public school students in Grades 11 and 12, but only 8.2 percent of AP examinees and 8.1 percent of IB examinees (Figure 7 on this page and Table 6 on page 44). Hispanics made up 43.5 percent of enrollment in Grades 11 and 12, but only 37.6 percent of AP examinees and 23.0 percent of IB examinees. Lastly, economically disadvantaged students made up 43.9 percent of public school students in Grades 11 and 12 , but only 32.7 percent of AP examinees and 19.4 percent of IB examinees (Table 2 on page 33 and Table 5 on page 40).

## Relationship Between Advanced Course Participation and Advanced Placement Examination Participation and Performance

## School Participation in the Advanced Placement Program

Based on data collected through the Texas Education Agency Public Education Information Management System (PEIMS), there were 2,204 schools serving any of Grades 9 through 12 in 2009-10. Of these, 52.4 percent $(1,154)$ offered AP courses, 48.0 percent $(1,057)$ had students who took at least one AP examination, and 44.3 percent (977) both offered courses and had students who took at least one examination (Table 7). Of the 1,154 schools that offered courses, 15.3 percent had no students who took examinations. Of the 1,057 schools with students who took examinations, 7.6 percent did not offer AP courses.

Note. Final semester completion of courses was used as the basis for numerical counts.

## Student Completion of Advanced Courses

The period from 1999-00 through 2009-10 was marked by a steady increase in the number of Texas public school students completing one or more courses considered academically advanced (Table A-9 in Appendix A). The number of students in Grades 9 through 12 completing at least one advanced course increased from 189,315 in 1999-00 to 317,482 in 2009-10. The percentage of students completing at least one advanced course who took an AP course increased from 55.1 percent in 1999-00 to 65.0 percent in 2009-10. The percentage of students in Grades $9-12$ completing at least one advanced course who took a course described as "other advanced" decreased from 70.1 percent in 1999-00 to 61.2 percent in 2009-10.

In the 1999-00 school year, 53.8 percent of all advanced courses completed by students in Grades 9-12 were AP courses. By 2009-10, the proportion had increased to 60.9 percent. In contrast, the proportion of all advanced courses completed that were identified as "other advanced" decreased from 44.7 percent in 1999-00 to 36.4 percent in 2009-10.

## Correspondence Between Advanced Courses and Advanced Placement Examinations

Most students who take AP examinations also complete at least one advanced course-an AP course, other advanced course, or both. Specifically, in 2009-10, 90.9 percent of AP examinees completed an AP course, and an additional 2.7 percent completed another type of advanced course (Table A-10 in Appendix A). Students who complete AP courses do not necessarily take AP examinations though. In 2009-10, almost a third (29.9\%) of students who completed AP courses did not take AP examinations (Table A-11 in Appendix A). However, the proportion of AP course completers taking AP examinations has increased considerably over the past 10 years. In 1999-00, 45.8 percent of AP course completers took AP examinations, and in 2009-10, the rate had increased to 70.1 percent. The growth of student participation in AP examinations generally coincided with state funding increases between the 1998-1999 and 2002-2003 biennia (Figure 1 on page 16). Although state funding decreased in the 2004-2005 biennium, student participation continued to rise through school year 2009-10.

## Advanced Placement Course and Examination Correspondence Within Subjects

Between 1999-00 and 2009-10, the relationship between student AP course completion and participation in corresponding AP examinations changed considerably. In the 1999-00 school year, 39.0 percent of AP course completers took the corresponding examinations (Table A-12 in Appendix A). By 2009-10, the proportion had increased to 66.5 percent. Similarly, the percentage of AP examinees that completed the corresponding courses increased from 74.7 percent in 1999-00 to 86.4 percent in 2009-10. Of examinations taken by students who had not completed the corresponding AP courses, the largest percentage was in the Spanish Language subject area (20.3\%), followed by English Language and Composition (16.5\%) and World History (9.0\%) (Table A-14 in Appendix A).

In 2009-10, the mean score on all AP examinations taken by students who had completed corresponding AP courses was higher than the mean score achieved by students who had not completed corresponding AP courses, at 2.50 and 2.44 , respectively (Table A-13 in Appendix A). Likewise, students who had completed the corresponding AP courses earned higher mean scores on average than students who had not completed the corresponding AP courses on 20 of the 27 examinations in which at least 500 students participated (Table A-14 in Appendix A). Students who had not completed the corresponding course performed better on Environmental Science and French Language. Mean scores on Art: Drawing, Computer Science A, Economics: Microeconomics, Physics B, and Psychology were the same for both groups of students.

# Results for Texas and the United States 

Introduction

Advanced Placement Examination Trends

Advanced Placement Examinee Profile

Advanced Placement Examination Profile

## Introduction

Policymakers and educators view statewide student participation and performance in advanced academic programs as indicators of how well schools and districts in their state are preparing high school students for college-level courses. Comparisons of state performance with nationwide performance and with other states are most appropriate when examination participation rates, demographic characteristics of examinees, and policies are similar. The College Board prepares summary reports of national and state Advanced Placement (AP) examination results (College Board \& Educational Testing Service, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010).

## Advanced Placement Examination Trends

In 2009-10, a total of 179,320 students in Texas public and nonpublic schools took 325,571 AP examinations (Table 8). This put Texas second in the nation, behind California, in the number of AP examinees and the number of AP examinations taken (Table A-15 in Appendix A). Texas was 5th among the states in the percentage increase ( $12.8 \%$ ) in the number of examinees from the previous year.

Source. College Board and Educational Testing Service (2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010).
Note. Data are based on public and nonpublic school examinees.

Between 1999-00 to 2009-10, participation in AP examinations increased more rapidly in Texas than in the United States as a whole (Table 8). In Texas, the number of AP examinees increased by 196.9 percent over the 10-year period from 1999-00 to 2009-10 and by 12.8 percent from the previous year. Nationally, the number increased by approximately 141.0 percent over the 10 -year period and by 9.0 percent from the previous year. Similar to the number of examinees, the number
of examinations increased more rapidly in Texas than the United States over the same time period. In Texas, the number of AP examinations increased by 202.5 percent over the 10 -year period from 1999-00 to 2009-10 and by 13.1 percent from the previous year. Nationally, the number increased by 152.3 percent over the 10 -year period and by 9.6 percent from the previous year.

Although the numbers of AP examinations with scores in the 3-5 range increased sharply over the 10 -year period for both Texas and the nation, the percentages of examinations with scores in the 3-5 range decreased. The declines may be related to rising participation rates. An increasing number of schools are offering AP Programs for the first time. As a result, a growing proportion of AP examinees are students taking AP courses and examinations for the first time. AP examinees who have had progressively rigorous academic preparation may have some performance advantage over students who have not (College Board, 2006).

## Advanced Placement Examinee Profile

In the 2009-10 school year, 54.4 percent of Texas AP examinees reported their race/ethnicity to the College Board as African American, American Indian, Asian/Pacific Islander, or Hispanic, whereas the combined proportion of these non-White student groups across the United States was considerably smaller ( $34.8 \%$ ) (Table 9 on page 52). In large part, the difference reflects the higher percentage of Hispanic AP examinees in Texas (36.8\%) compared to the United States (15.1\%).

## Advanced Placement Examination Profile

The three examinations with the largest numbers of test takers were the same in Texas and in the United States as a whole: English Language and Composition, United States History, and English Literature and Composition (Table A-16 in Appendix A). Nationally, Calculus AB remained the fourth most popular AP examination in 2009-10, whereas in Texas, World History was the fourth most popular examination. The top four examinations accounted for 48.1 percent of all AP examinations taken in 2009-10 by Texas public and nonpublic school students and 42.7 percent of all AP examinations taken by students in the United States (Table A-16 in Appendix A and Table 8 on page 50 ).

In 2009-10, the five AP examinations with the highest percentages of scores in the 3-5 range in Texas were Chinese Language and Culture (96.6\%), Japanese Language and Culture (80.6\%), Calculus BC (75.4\%), European History (71.0\%), and Spanish Language (70.0\%) (Table A-16 in Appendix A). The five AP examinations with the highest percentage of scores in the 3-5 range in the United States were Chinese Language and Culture (95.8\%), Calculus BC (82.4\%), Japanese Language and Culture (76.3\%), Studio Art: Drawing: (72.3\%), and Physics C: Mechanics (72.2\%). Compared to the United States, Texas had higher percentages of examinations with scores in the 3-5 range on 3 of 33 examinations: Chinese Language and Culture, European History, and Japanese Language and Culture.

Note. Counts of examinees that are less than 5 are replaced with " $<5$ " for student anonymity. Counts that could be used to impute those that are replaced with " $<5$ " are replaced with " $<X X$," where $X X$ is the actual count rounded up to the next multiple of 5 . For example, a count of 43 would be listed as $<45$. Percentages calculated using values $<5$ or masked to prevent imputation are replaced with a dash ( - ). Means calculated using values $<5$ are replaced with a dash (-). Parts may not add to 100 percent because of rounding.

Note. Last semester completion of courses was used as the basis for numerical counts. AP examinations were linked to corresponding AP courses by student to obtain the statistics. Thus, some counts may be slightly imprecise because data needed for perfect student matching were not available. Parts may not add to 100 percent because of rounding

## Notes on Appendix B

Of the 1,087 Texas public school districts and charter schools with enrollment in Grade 11 and/or Grade 12 in school year 2009-10, a total of 672 districts had students who took at least one Advanced Placement (AP) examination, and 34 of these 672 districts also had students who took at least one International Baccalaureate (IB) examination. In addition, a total of 577 districts had five or more AP examinees in 2009-10, an increase from 571 districts in 2008-09. Of the 577 districts, 406 had five or more examinees earning scores of 3 or above, a decrease from 407 districts in 2008-09.

The 2009-10 AP examination results listed for each district and campus in Table B-1 include: the total number of students enrolled in Grades 11 and 12, number and percentage of 11th and 12th graders who took at least one AP examination, number and percentage of examinees earning at least one score in the 3-5 range, total number of examinations taken, and number and percentage of AP examinations receiving scores in the 3-5 range. Similarly, IB results for 2009-10 are listed by district and campus in Table B-2; however, columns pertaining to the number and percentage of examinees and examinations refer to scores in a 4-7 range. Table B-3 contains combined Texas AP and IB examination results in 2009-10 for those districts and campuses in which both AP and IB examinations were offered.

In Tables B-1 through B-3, to protect student confidentiality, AP and IB participation and performance data are not presented for districts and campuses with fewer than five students. In this case, the note " $<5$ " appears. In addition, the note " $<5$ " appears where fewer than five students met or exceeded the AP or IB criterion score on at least one examination, where fewer than five examinations were taken, and where fewer than five examinations had scores that met or exceeded the AP or IB criterion score. This masking ensures that single sets of scores cannot be identified or linked with any individual. When it is possible for these data to be arithmetically inferred from other district- or campus-level data, additional masking is employed using intervals of five students, and a note such as the following appears: " $<10, "$ " $<15, "$ " $<20, "$ etc. Similarly, to prevent inference of these data from percentages, a dash ( - ) appears in place of the corresponding percentages.

## Notes on Appendix C

Source. Data about teachers, district expenditures, and students are from the Public Education Information Management System (PEIMS). Tax and property data are provided by the Comptroller's Property Tax Division. Information about college admissions examinations and the Texas Assessment of Knowledge and Skills (TAKS) is provided by the test contractors. All data are for the 2009-10 school year, with the exception of college admissions (e.g., SAT/ACT) and district expenditures (e.g., Operating Cost Per Student), which lag one year.

## Cost of Education Index

The Cost of Education Index (CEI) reflects geographic variations in costs beyond the control of districts. The CEI has a minimum value of 0.0 and a maximum of 1.2. Most districts have CEI values of at least 1.0. Districts with CEI values of 0.0 are primarily charter school districts. Districts are grouped into five subcategories, each with approximately the same number of districts.

## District Type

Districts are grouped into eight subcategories, ranging from major urban to rural, based on factors such as enrollment, growth in enrollment, economic status, and proximity to urban areas. Charter school districts make up a ninth subcategory. The subcategories are as follows.

## Major Urban

A district is classified as major urban if: (a) it is located in a county with a population of at least 750,000 ; (b) its enrollment is the largest in the county or at least 75 percent of the largest district enrollment in the county; and (c) at least 35 percent of enrolled students are economically disadvantaged. A student is reported as economically disadvantaged if he or she is eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program.

## Major Suburban

A district is classified as major suburban if: (a) it does not meet the criteria for classification as major urban; (b) it is contiguous to a major urban district; and (c) its enrollment is at least 3 percent that of the contiguous major urban district or at least 4,500 students. A district also is classified as major suburban if: (a) it does not meet the criteria for classification as major urban; (b) it is not contiguous to a major urban district; (c) it is located in the same county as a major urban district; and (d) its enrollment is at least 15 percent that of the nearest major urban district in the county or at least 4,500 students.

## Other Central City

A district is classified as other central city if: (a) it does not meet the criteria for classification in either of the previous subcategories; (b) it is not contiguous to a major urban district; (c) it is located in a county with a population of between 100,000 and 749,999 ; and (d) its enrollment is the largest in the county or at least 75 percent of the largest district enrollment in the county.

## Other Central City Suburban

A district is classified as other central city suburban if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it is located in a county with a population of between 100,000 and 749,999 ; and (c) its enrollment is at least 15 percent of the largest district enrollment in the county. A district also is other central city suburban if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it is contiguous to an other central city district; (c) its enrollment is greater than 3 percent that of the contiguous other central city district; and (d) its enrollment exceeds the median district enrollment for the state of 765 students.

## Independent Town

A district is classified as independent town if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it is located in a county with a population of 25,000 to 99,999 ; and (c) its enrollment is the largest in the county or greater than 75 percent of the largest district enrollment in the county.

## Non-Metropolitan: Fast Growing

A district is classified as non-metropolitan: fast growing if: (a) it does not meet the criteria for classification in any of the previous subcategories; (b) it has an enrollment of at least 300 students; and (c) its enrollment has increased by at least 20 percent over the past five years.

## Non-Metropolitan: Stable

A district is classified as non-metropolitan: stable if: (a) it does not meet the criteria for classification in any of the previous subcategories; and (b) its enrollment exceeds the median district enrollment for the state.

## Rural

A district is classified as rural if it does not meet the criteria for classification in any of the previous subcategories. A rural district has either: (a) an enrollment of between 300 and the median district enrollment for the state and an enrollment growth rate over the past five years of less than 20 percent; or (b) an enrollment of less than 300 students.

## Charter School Districts

Charter school districts are open-enrollment school districts chartered by the State Board of Education. Established by the Texas Legislature in 1995 to promote local initiative, charter school districts are subject to fewer regulations than other public school districts. Generally, charter school districts are subject to laws and rules that ensure fiscal and academic accountability but that do not unduly regulate instructional methods or pedagogical innovation. Like other public school districts, charter school districts are monitored and accredited under the statewide testing and accountability system.

## Education Service Center Regions

The state is divided into 20 geographic regions, each served by an education service center (ESC). Although not usually the case, an ESC may serve districts outside its geographic boundaries. For this category, districts are grouped by the ESC regions that serve them, not by the ESC regions in which they are located geographically.

## Enrollment

Districts are grouped into nine subcategories based on number of students enrolled. Enrollment counts are taken on the last Friday in October of each year.

## Highest Property Value

Each district is placed into one of four subcategories of taxable property based on type of property with the highest value for the district. Special statutory school districts and charter school districts make up a fifth subcategory, labeled "non-taxing entities," because they do not have taxable property. The four subcategories of taxable property are:

- residential: single-family and multi-family residential, and residential inventory;
- land: vacant lots and taxable rural real property;
- oil and gas: oil, gas, and minerals; and
- business: commercial and industrial real property, commercial and industrial personal, and utilities.

## Operating Cost Per Student

Operating costs are the sum of actual expenditures for a district's operation. Note that the number shown is not the amount actually spent on each student, but rather a per-student average of the total. Per-student amounts are calculated as expenditures for the prior school year divided by the current number of students. Districts are grouped into five subcategories, each with approximately the same number of districts.

## Property Wealth: Average, Equal Student Groups, and Median

Property wealth is used as an indicator of a district's ability to raise local funds on a per-student basis. It is calculated as total taxable property value for the last completed calendar year divided by total enrollment for the current school year. Taxable value is the traditional measure of value, not the alternative value used in state funding formulas. The "property wealth: average" category classifies districts as either under or over the state average for district property wealth. The "property wealth: equal student groups" category groups districts by property wealth into 20 subcategories, each accounting for approximately the same number of students. The "property wealth: median category" groups districts by property wealth into 10 subcategories, each with approximately the same number
of districts. In each of the three categories, special statutory school districts and charter school districts make up a separate subcategory, labeled "non-taxing entities," because they do not have taxable property wealth.

## SATIACT 2008-09: At or Above Criterion, Percentage

Districts are grouped into five subcategories based on percentage of examinees in the prior year who scored at or above the criterion score on either the SAT or ACT. Districts that did not have test takers make up a sixth subcategory. Criterion on the SAT is a combined score of 1110 , and criterion on the ACT is a composite score of 24 .

## SATIACT 2008-09: Participation, Percentage

Districts are grouped into three subcategories based on percentage of non-special education graduates who took the SAT, ACT, or both in the prior year. Districts that did not have graduates make up a fourth subcategory.

## Small/Sparse Adjustment

Districts are grouped into four subcategories, each with approximately the same number of districts, based on adjustments to state funding to compensate for small and/or sparsely populated districts. Districts receiving no small/sparse adjustment make up a fifth subcategory. Small/sparse adjustments are shown as percentages of total adjusted basic allotment amounts.

## Student Change: 2008-09 - 2009-10

Districts are grouped into five subcategories based on change in enrollment from the prior school year to the current school year.

## Student Density

Districts are grouped into four subcategories based on number of students per square mile. Special statutory school districts and charter school districts make up a fifth subcategory, labeled "non-taxing entities," because they do not have mileage information.

## Students: African American, Hispanic, and Non-White, Percentage

In each of these three categories, districts are grouped into six subcategories based on racial/ethnic composition of enrollment. The term "Non-White" is used to designate the following groups combined: African American, not of Hispanic origin; American Indian or Alaska Native; Asian or Pacific Islander; and Hispanic.

## Students: Economically Disadvantaged, Percentage

Districts are grouped into six subcategories based on percentage of enrollment reported as economically disadvantaged. A student is reported as economically disadvantaged if he or she is eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program.

## TAKS: Passing All Tests Taken, Percentage

Districts are grouped into five subcategories based on percentage of Texas Assessment of Knowledge and Skills (TAKS) examinees in Grades 3-11 who passed all TAKS tests taken. Districts that did not administer TAKS make up a sixth subcategory. The percentages include only examinees who were enrolled in the same districts in October of the school year.

## Tax: Local Adopted Rate

Districts are grouped into four subcategories, each with approximately the same number of districts, based on total locally-adopted tax rate. Special statutory school districts and charter school districts make up a fifth subcategory, labeled "non-taxing entities," because they do not levy property taxes. The total locally-adopted tax rate is made up of a maintenance and operation rate and a debt service rate (sometimes referred to as the Interest and Sinking fund rate). Rates are expressed per $\$ 100$ of taxable value.

## Tax: Local Maintenance \& Operation Rate

Districts are grouped into three subcategories based on locally-adopted maintenance and operation (M\&O) tax rate. Special statutory school districts and charter school districts make up a fourth subcategory, labeled "non-taxing entities," because they do not levy property taxes. The $\mathrm{M} \& \mathrm{O}$ rate includes money generated by districts for equalizing wealth.

## Teacher Experience

Districts are grouped into four subcategories, each with approximately the same number of districts, based on average years of teacher experience. The average for a district is calculated by multiplying the full-time-equivalent (FTE) count for each teacher by years of experience. Results are summed, then divided by the FTE count for all teachers.

## Teacher Salary

Districts are grouped into four subcategories, each with approximately the same number of districts, based on average teacher salary. The average for a district is calculated by dividing the salary for all teachers by the full-time-equivalent (FTE) count for all teachers. Salaries reflect pay for regular duties only; they do not include pay for supplemental duties.

## Teachers: Non-White, Percentage

Districts are grouped into six subcategories based on percentage of non-White teachers. The term "Non-White" is used to designate the following groups combined: African American, not of Hispanic origin; American Indian or Alaska Native; Asian or Pacific Islander; and Hispanic. The percentage for a district is calculated by dividing the full-time-equivalent (FTE) count for non-White teachers by the FTE count for all teachers.

## Teachers: With Advanced Degrees, Percentage

Districts are grouped into four subcategories, each with approximately the same number of districts, based on percentage of teachers with advanced degrees. The percentage for a district is calculated by dividing the full-time-equivalent (FTE) count for teachers with master's or doctorate degrees by the FTE count for all teachers.

## U.S.-Mexico Border Region

Districts are grouped into two subcategories, border and non-border, based on their geographic relationship to the U.S.-Mexico border. The districts classified as border districts are those that are located in the 32 counties situated within approximately 62.5 miles of the U.S.-Mexico border, based on the 1983 Agreement on Cooperation for the Protection and Improvement of the Environment in the Border Area (aka, the La Paz Agreement). The La Paz Agreement defines the U.S.-Mexico border region as extending more than 2,000 miles from the Gulf of Mexico to the Pacific Ocean and approximately 62.5 miles on either side of the border.

## Compliance Statement

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
